The "Buzz" About New Britain, Connecticut - A City Profile

By Caroline Czajkowski, Research Analyst, CT Department of Labor

ew Britain, Connecticut, or lovingly called "Hard Hittin" New Britain due to its industrial and blue-collar past, was originally settled as part of Farmington in 1687. By 1754, the rural hamlet separated from Farmington and became part of the township of Berlin. However, due to its central location and access to waterpower from local rivers, the area developed into a major manufacturing hub specifically in hardware and tools. With the establishment of Russwin (P.&F. Corbin) in 1839 and Stanley Works (now Stanley Black and Decker) in 1843, the community grew large enough to be incorporated as a city in 1850. Eventually the city garnered the moniker of "Hardware City" due to the residence of many highprofile companies such as Corbin Cabinet Lock Company, North & Judd Manufacturing Company, Fafnir Bearing Company, and Landers, Fray & Clark, in addition to the two previously mentioned. New Britain was compared to a beehive buzzing with activity and hard work. This imagery was even adopted into the city's seal and emblem. New Britain's need for a growing workforce while the prospect of attaining the American Dream attracted waves of immigrants including Italian, Irish, German, Polish, and Ukrainian populations. These communities influenced much of what is still seen in the

city's local color. New Britain reached its industrial peak in the early 20th century. It helped war efforts by producing manufactured goods for the armed forces during World War II. However, starting in the mid-20th century, American industry saw a drastic turnover. Manufacturing took a backseat to deindustrialization. Moreover, global competition and outsourcing eclipsed Americanmade goods. As with many manufacturing cities such as Detroit, Pittsburgh and Cleveland, New Britain also struggled to live up to its glory days. Loss of manufacturing jobs led to unemployment and population loss. That population loss has reversed in the current century. New Britain's population is higher today than it was in 2000. Economic diversity through healthcare, small business and education have been leading factors rejuvenating the city. In recent years, infrastructure and redevelopment projects have been implemented to improve the city and its industry.

LOCATION

New Britain, centrally located in the state of Connecticut, is part of Hartford County. It lies approximately 10 miles southwest of Hartford, the state's capital. The city covers about 13.5 square miles and is a mix of residential neighborhoods,

THE CONNECTICUT ECONOMIC DIGEST

The Connecticut Economic Digest is published monthly by the Connecticut Department of Labor, Office of Research, and the Connecticut Department of Economic and Community Development. Its purpose is to regularly provide users with a comprehensive source for the most current, up-to-date data available on the workforce and economy of the state, within perspectives of the region and nation.

The annual subscription is \$50. Send subscription requests to: *The Connecticut Economic Digest*, Connecticut Department of Labor, Office of Research, 200 Folly Brook Boulevard, Wethersfield, CT 06109-1114. Make checks payable to the Connecticut Department of Labor. Back issues are \$4 per copy. The Digest can be accessed free of charge from the DOL Web site. Articles from *The Connecticut Economic Digest* may be reprinted if the source is credited. Please send copies of the reprinted material to the Managing Editor. The views expressed by the authors are theirs alone and may not reflect those of the DOL or DECD.

 industrial areas and open spaces. It is bordered by Farmington to the North, Newington to the East, Berlin to the South, Plainville to the West, and Southington to the South-West.

DEMOGRAPHICS

New Britain has a population of approximately 74,100 residents which is roughly 2.05 % of Connecticut's total population of 3.62 million. 51.6 % of New Britain's inhabitants are female and 48.4% are male while the median age for a resident in the city is between 33 and 35 years. New Britain's diverse demographics show that roughly 46% identify as White, 14.8% as Black/African American, 2.6% as Asian, 0.5% American Indian/ Alaska Native, and 21% as some other race. Of the city's population, 14.9 % consider themselves as mixed race while 85.1% identify as coming from a single ethnicity. Notably, 44.3% of New Britain's population consider themselves as Hispanic or Latino which is around 5% of Connecticut's total Hispanic/ Latino population of 623,293.

New Britain's diverse backgrounds influence language spoken at home. Over 49% of its residents speak a language other than English at home which is significantly higher than the roughly 24% reported statewide. The breakdown of language in the city is: 50.9% solely English, 30.2% Spanish, 12.9% Indo-European languages, 1.8% Asian/ Pacific Islander, and 4.2% other languages.

The diversity of language can be partly accredited to New Britain's industrial past. Starting from the early 1850's, an influx of international communities called the city home because of job opportunities in local manufacturing establishments such as the Stanley Works or Corbin Cabinet Lock Company to name a few. These included Italian, Irish, German, Polish, and Ukrainian folk. In 1917, when Puerto Rico became a U.S. territory, families traveled to the mainland without immigration restrictions. Many Puerto Ricans arrived in New Britain for jobs in the manufacturing industry, particularly those producing hardware and goods. The city actively accepted and fostered the immigrant communities which encouraged further migration as well as retention within New Britain.

TRANSPORTATION AND COMMUTING

New Britain is easily accessed through Interstate 84 and Route 9. On average city residents spend roughly 22 minutes commuting to work less than the 27-minute state average. Many New Britain residents work within the city limits or neighboring towns, commuting to jobs in local government, education, healthcare, retail, and small manufacturing. This contributes to a shorter average commute time for those living and working within the city. Of the population that commutes, roughly 85.2% drive alone and 6.7% carpool. Public transportation use is at 2.6% with CTtransit and CTfastrack offering public transportation options. The city has also invested in bike lanes and paths for easier movements about the town and neighboring areas. 4.2% of the working population walk to work as a means of transportation while 0.3% use a bike. Future rail plans are in development to link New Britain to regional train services providing another commuting option. Taxi services and rideshares such as Lyft and Uber are also options for travel which about 2.1% of the working population utilize. Approximately 6.9% of employees work from home (City-Data.com).

AMENITIES

New Britain offers a wide range of amenities for both its residents and visitors. It is home to Central Connecticut State University (CCSU) as well as over 15 elementary and middle schools. Notable parks and nature centers include the historic Walnut Hill Park. Stanley Quarter Park and Willow Brook Park as well as the Hungerford Nature Center. Key cultural and educational experiences include the New Britain Museum of American Art, the New Britain Industrial Museum, the New Britain Youth Museum and the New Britain Art League. The city also has several performing arts centers including Trinity-on-Main, Hole in the Wall Theater, New Britain Symphony Orchestra, the Repertory Theatre of New Britain, as well as CCSU's theater department. It boasts a baseball stadium which is the home of the New Britain Bees and has a 27-hole golf course, the Stanley Golf Course. Several community centers and social

services are also available. These include the New Britain Senior Center, the Boys and Girls Club, YMCA, YWCA and the New Britain Social Services Department. The Hospital of Central Connecticut at New Britain General as well as the Hospital of Special Care are two of the main health care facilities located within the city.

INDUSTRY EMPLOYMENT

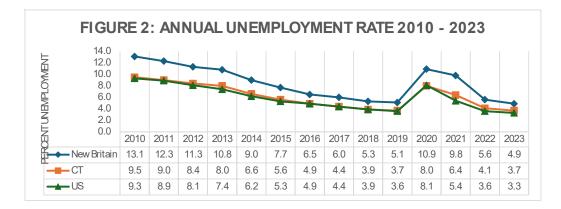

Total employment, based on the Quarterly Census of Employment and Wages (QCEW) for 2023, was 23,947 for employees in all sectors (Figure 1) for the city of New Britain. The five industries that employed the greatest number of workers were Manufacturing, Retail Trade, Healthcare/Social Assistance, Accommodations/Food Service, and Government specifically State and Local Government. The largest of the five, Healthcare and Social Assistance, made up 30.3% of the city's workers. Government positions including the public school system amounted to 21.1% of employees in New Britain, while Manufacturing came in at 13.7%, Retail at 7.6%, and

Accommodations/Food Service at 4.9%.

WAGES

The annual average wage for all workers in New Britain in 2023 was \$69,198. This was a 91% increase, or \$31,358 more than the \$37,840 in 2000. Wages increases were due to inflationary pressures, labor shortages, the cost of living, and the need for skilled workers. However, statewide, the annual average wage in 2000 was \$45,454 while in 2023 the average was \$83,773. This puts New Britain below the CT state average. The highest change in wages in New Britain was seen in the Insurance Industry. Wage increased from \$42,302 in 2000 to \$133,761 in 2023, a \$91,459 change in earnings. Construction also saw a large wage increase. Average construction wages in 2000 were \$46,861 and rose to \$104,872 in 2023 which is a \$58,011 growth in earnings. The lowest increase in wages was in the Art, Entertainment

December 2024

and Recreation Industry which was closely followed by the Accommodation and Food Industry. Wages in 2000 for employees in the Art, Entertainment and Recreation Industry were \$13,169 in 2023, which rose to \$27,443, a \$14,274 difference. Workers in the Accommodation and Food Industry received a \$15,768 increase in wages over the span of 23 years from 2000 earnings of \$11,962 to \$27,730 in 2023.

UNEMPLOYMENT

While trending similarly to both indexes, New Britain's unemployment rate was higher than both the state and national averages from 2010 to 2023 (Figure 2). Straight out of the Great Recession from 2008 through 2009, New Britain saw an unemployment rate of 13.1% in 2010 while Connecticut and the rest of the United States saw unemployment rates in the low to mid 9%'s. National, state, and city

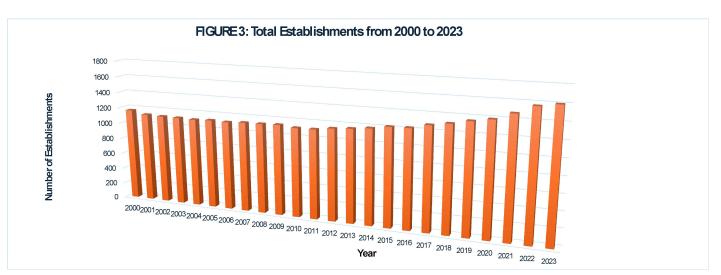

unemployment rates declined until 2020 when the COVID outbreak erupted, and national lockdowns were implemented. With business restrictions or closures, shifts in consumer behavior, and the disruption of the global supply chain, unemployment rates quickly skyrocketed. New Britain jumped back up to a 10.9 % unemployment rate while at the national and state levels, unemployment increased to 8.1% and 8.0%. Unemployment rates have been dropping for all three while jobs have been increasing in most sectors. New Britain's unemployment rate (not seasonally adjusted) was just 3.6% in November 2024 (latest available).

ESTABLISHMENTS

New Britain has seen steady growth in establishments since 2012 (Figure 3). During this timeframe 486 businesses were established in the city. Interestingly, even in 2020, the year of the COVID-19 pandemic, New Britain saw a growth in new businesses. Other aspects that have restored interest in New Britain can be attributed to the modernizing of the city's infrastructure, citywide improvements with a focus on the downtown area, updates on public areas and buildings such as schools, and investments in housing.

HOUSING

The housing characteristics in New Britain, Connecticut, reflect its diverse population and historical roots. There are approximately 30,000 housing units in the city which are a mix of single-family homes, multifamily units, and apartment complexes. Multi-family units dominate because of New Britain's urban environment and

THE CONNECTICUT ECONOMIC DIGEST

December 2024

historical past which accommodated its industrial workforce. Forty percent of New Britain's residents are homeowners with the median home price of \$250,000 in 2022. Most families, students from Central Connecticut State University, and young professionals rent their accommodations. Monthly rents range from around \$1,000 to \$1,800 for a two-bedroom unit, depending on location and amenities. New Britain has a significant amount of affordable and subsidized housing. The city has made efforts to expand options for low-income families because of a rise in demand and limited new construction. The pressure on housing availability has induced the city's prioritization of housing developments as part of its

broader revitalization efforts, including mixed-use developments and updates to existing properties. Redevelopment initiatives in the downtown area aim to attract residents and businesses, with new apartment complexes and renovated buildings catering to a range of incomes.

CONCLUSION

New Britain, Connecticut, known for its rich industrial heritage and moniker "Hardware City," has undergone a significant transformation over the years. From its bustling manufacturing peak in the early 20th century to the challenges of deindustrialization and economic shifts, the city has consistently demonstrated resilience. Its central location, cultural diversity, and historical significance have shaped its identity as a vibrant and evolving community.

Today, New Britain balances its industrial roots with a diversified economy that includes healthcare, education, retail, and small business development. Investments in infrastructure, housing, and community revitalization continue to breathe new life into the city. With a blend of cultural institutions, green spaces, and a strong sense of community, New Britain stands as an example of adaptation and innovation, offering a promising future while honoring its storied past.

General Drift Indicators are composite measures of the four-quarter change in three coincident (Connecticut Manufacturing Production Index, nonfarm employment, and real personal income) and three leading (housing permits, manufacturing average weekly hours, and initial unemployment claims) economic variables, and are indexed so 2007 = 100.

The **Philadelphia Fed's Coincident Index** summarizes current economic condition by using four coincident variables: nonfarm payroll employment, average hours worked in manufacturing, the unemployment rate, and wage and salary disbursements deflated by the consumer price index (U.S. city average).

December 2024

employment increased over the year.

NOTE: More industry detail data is available for the State and its nine labor market areas at: http:// www.ctdol.state.ct.us/lmi/202/covered.htm. The data published there differ from the data in the preceding tables in that they are developed from a near-universe count of Connecticut employment covered by the unemployment insurance (UI) program, while the data here is sample-based. The data drawn from the UI program does not contain estimates of employment not covered by unemployment insurance, and is lagged several months behind the current employment estimates presented here.

LABOR FORCE CONCEPTS

The **civilian labor force** comprises all state residents age 16 years and older classified as employed or unemployed in accordance with criteria described below. Excluded are members of the military and persons in institutions (correctional and mental health, for example).

The **employed** are all persons who did any work as paid employees or in their own business during the survey week, or who have worked 15 hours or more as unpaid workers in an enterprise operated by a family member. Persons temporarily absent from a job because of illness, bad weather, strike or for personal reasons are also counted as employed whether they were paid by their employer or were seeking other jobs. The **unemployed** are all persons who did not work, but were available for work during the survey week (except for temporary illness) and made specific efforts to find a job in the prior four weeks. Persons waiting to be recalled to a job from which they had been laid off need not be looking for work to be classified as unemployed.

LABOR FORCE CONCEPTS (Continued)

The unemployment rate represents the number unemployed as a percent of the civilian labor force.

With the exception of those persons temporarily absent from a job or waiting to be recalled to one, persons with no job and who are not actively looking for one are counted as "not in the labor force".

Over the course of a year, the size of the labor force and the levels of employment undergo fluctuations due to such seasonal events as changes in weather, reduced or expanded production, harvests, major holidays and the opening and closing of schools. Because these seasonal events follow a regular pattern each year, their influence on statistical trends can be eliminated by adjusting the monthly statistics. Seasonal Adjustment makes it easier to observe cyclical and other nonseasonal developments.

TECHNICAL NOTES

BUSINESS STARTS AND TERMINATIONS

BUSINESS STARTS AND TERMINATIONS Registrations and terminations of business entities as recorded with the U.S. Census Bureau and the Connecticut Department of Labor (DOL) are an indication of new business formation and activity. DOL business starts include new employers which have become liable for unemployment insurance taxes during the quarter, as well as new establishments opened by existing employers. DOL business terminations are those accounts discontinued due to inactivity (no employees) or business closure, and accounts for individual business establishments that are closed by still active employers. The Census's business formations include limited liability companies, limited liability partner-ships, and foreign-owned (out-of-state) and domestic-owned (in-state) corporations.

CONSUMER PRICE INDEX

The Consumer Price Index (CPI), computed and published by the U.S. Bureau of Labor Statistics, is a measure of the average change in prices over time in a fixed market basket of goods and services. It is based on prices of food, clothing, shelter, fuels, transportation fares, charges for doctors' and dentists' services, drugs and other goods and services that people buy for their day-to-day living. The Northeast region is comprised of the New England states, New York, New Jersey and Pennsylvania.

EMPLOYMENT COST INDEX

The Employment Cost Index (ECI) covers both wages and salaries and employer costs for employee benefits for all occupations and establishments in both the private nonfarm sector and state and local government. The ECI measures employers' labor costs free from the influences of employment shifts among industries and occupations. The base period for all data is December 2005 when the ECI is 100.

GAMING DATA

Indian Gaming Payments are amounts received by the State as a result of the slot compact with the two Federally recognized tribes in Connecticut, which calls for 25 percent of net slot receipts to be remitted to the State. Indian Gaming Slots are the total net revenues from slot machines only received by the two Federally recognized Indian tribes.

HOURS AND EARNINGS ESTIMATES

Production worker earnings and hours estimates include full- and part-time employees working within manufacturing industries. Hours worked and earnings data are computed based on payroll figures for the week including the 12th of the month. Average hourly earnings are affected by such factors as premium pay for overtime and shift differential as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of weekly hours worked and hourly earnings. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

INITIAL CLAIMS

Average weekly initial claims are calculated by dividing the total number of new claims for unemployment insurance received in the month by the number of weeks in the month. A minor change in methodology took effect with data published in the March 1997 issue of the DIGEST. Data have been revised back to January 1980.

INSURED UNEMPLOYMENT RATE

Primarily a measure of unemployment insurance program activity, the insured unemployment rate is the 13-week average of the number of people claiming unemployment benefits divided by the number of workers covered by the unemployment insurance system.

LABOR FORCE ESTIMATES

LABOR FORCE ESTIMATES Labor force estimates are a measure of the work status of people who live in Connecticut. Prepared under the direction of the U.S. Bureau of Labor Statistics, the statewide estimates are the product of a signal-plus noise model, which uses results from the Current Population Survey (CPS), a monthly survey of Connecticut households, counts of claimants for unemployment benefits, and establishment employment estimates. The 2015 LAUS Redesign includes improved time-series models for the census divisions, states, select substate areas, and the balances of those states; an improved real-time benchmarking procedure to the national Current Population Survey (CPS) estimates; an improved smoothed seasonal adjustment procedure; and improved treatment of outliers. Non-modeled area estimation improvements in-clude: updated Dynamic Residency Ratios (DRR); more accurate estimates for all-other employment; more accurate estimation of agricultural employment; and improved estimation of non-covered agricultural unemployment. Handbook estimation is now done at the city/town level instead of at the Labor Market Area (LMA) level in Connecticut, which better reflects local conditions. The Redesign also introduces estimation inputs from the American Community Survey (ACS) to replace inputs that were previously obtained from the decennial census long-form survey. Labor force data, reflecting persons employed by place of residence, are not directly comparable to the place-of-work industry employment reflecting persons employed by place of residence, are not directly comparable to the place-of-work industry employment series. In the labor force estimates, workers involved in labor disputes are counted as employed. The labor force data also includes agricultural workers, unpaid family workers, domestics and the self-employed. Because of these conceptual differences, total labor force employment is almost always different from nonfarm wage and salary employment.

LABOR MARKET AREAS

LABOR MARKET AREAS All Labor Market Areas (LMAs) in Connecticut except three are federally-designated areas for developing labor statistics. For the sake of simplicity, the federal Bridgeport-Stamford-Norwalk NECTA is referred to in Connecticut DOL publications as the Bridgeport-Stamford LMA, and the Hartford-West Hartford-East Hartford NECTA is the Hartford LMA. The northwest part of the state is now called Torrington-Northwest LMA. Five towns which are part of the Springfield, MA area are published as the Enfield LMA. The towns of Eastford and Hampton and other towns in the northeast are now called Danielson-Northeast LMA. Industry employment and labor force data estimates contained in Connecticut Department of Labor publications are prepared following the same statistical procedures developed by the U.S. Department of Labor, Bureau of Labor Statistics, whether for federally designated or state-determined areas.

NONFARM EMPLOYMENT ESTIMATES

Nonfarm employment estimates are derived from a survey of businesses to measure jobs by industry. The estimates include all full- and part-time wage and salary employees who worked during or received pay for the pay period which includes the 12th of the month. Excluded from these estimates are proprietors, self-employed workers, private household employees and unpaid family workers. In some cases, due to space constraints, all industry estimates are not shown. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

UI COVERED WAGES

UI covered wages is the total amount paid to those employees who are covered under the Connecticut's Unemployment Insurance (UI) law for services performed during the quarter. The fluctuations in the 1992-93 period reflect the effect of the changes in the tax law and the massive restructuring in the state's economy.
