Connecticut Short-Term Projections: Job Growth 2024Q2 to 2026Q2

By Matthew Krzyzek, Associate Economist, CT Department of Labor

onnecticut's economy is projected to add almost 39,000 jobs through the end of the short-term projections period (2nd quarter 2026). The industries driving this growth include Health Care, Educational Services, Public Administration, and Manufacturing. Through 2026Q2, we project overall employment in Connecticut to increase by 2.1% from 1,849,153 to 1,887,722 including selfemployment and unpaid family workers. The Goods-Producing

sector is projected to grow by 2.9% and the Service-Providing sector is projected to grow by 2.0% over two years. This latter sector represents 86.3% of industry employment in the state.

Projections by Industry

Each year, the Office of Research at the Connecticut Department of Labor produces short-term employment projections by industry and occupation. Among the 20

Figure 1

THE CONNECTICUT -

The Connecticut Economic Digest is published monthly by the Connecticut Department of Labor, Office of Research. Its purpose is to regularly provide users with a comprehensive source for the most current, up-to-date data available on the workforce and economy of the state, within perspectives of the region and nation.

The annual subscription is \$50. Send subscription requests to: The Connecticut Economic Digest, Connecticut Department of Labor, Office of Research, 200 Folly Brook Boulevard, Wethersfield, CT 06109-1114. Make checks payable to the Connecticut Department of Labor. Back issues are \$4 per copy. The Digest can be accessed free of charge from the DOL Web site. Articles from The Connecticut Economic Digest may be reprinted if the source is credited. Please send copies of the reprinted material to the Managing Editor. The views expressed by the authors are theirs alone and may not reflect those of the Connecticut Department of Labor.

E-Mail: dol.econdigest@ct.gov Website: http://www.ctdol.state.ct.us/lmi industry groups shown in Figure 1, 14 are projected to increase over two years and 6 are projected to decline. The largest increases are expected in Health Care (+6,396), Educational Services (+4,917), Government (+4,656), and Manufacturing (+4,315). These four industries represent a combined 39% of base quarter 2024O2 employment and 56% of total industry growth through 202602.

Health Care

The Health sector is projected to add 6,396 jobs over the projections period. Among its three component industries, Ambulatory Health Care Services (NAICS-621), is projected to add 3,886 jobs through 2026Q2 and account for 61% of overall Health Care growth, while representing 43% of base quarter employment. Hospitals (NAICS-622) are projected to add 1,560 jobs over two years, or 24% of overall Health Care growth, and Nursing & Residential Care Facilities (NAICS-623) is projected to grow by 950 jobs or 15% of total health care growth.

Educational Services

Projected Educational Services employment growth of 4,917 is mostly occurring in its two largest component industries, Elementary and Secondary Schools (NAICS 6111) and Colleges, Universities, and Professional Schools (NAICS 6113). Elementary and Secondary Schools, which account for 60% of employment in this sector, is projected to add 2,512 jobs (up 2.2%) while Colleges and Universities are projected to add 1,406 jobs (up 2.4%).

Government

Government excluding education is projected to increase by 4,656 jobs or +5.4% over two years. More than half of this

overall increase is projected to occur in Local Government, which is projected to increase by 2,682 (+6.1%) over two years. State Government is similarly projected to increase by 6.1% and add 1,714 jobs. Federal Government employment is projected to grow slower, up 260 jobs (+1.8%), with a slight decline in Postal Service employment being offset by small gains in other areas.

Manufacturing

Manufacturing is projected to increase by 4,315 jobs or +2.8%over two years. This projected increase reverses slight declines in Manufacturing. The industry had a post-COVID employment peak during 2023Q3 at 158,000 and subsequently declined slightly to 155,000 during the 2024Q2 base quarter. The projected growth through 2026Q2 is driven mostly by projected gains in Transportation Equipment Manufacturing (NAICS 336), which accounts for 82% of the 4,315 Manufacturing growth. That component industry is projected to increase by 3,524 or +7.6% over two years. This represents known hiring initiatives by many manufacturers in the state.1

The six sectors projected to lose employment through 2026Q2 are Retail Trade (-1,489 or -0.9%), Information (-407 or -1.3%), Utilities (-201 or -3.9%), Management (-161 or -0.5%), Real Estate (-150 or -0.8%), and Administrative and Support Services (-107 or -0.1%).

The projected Retail Trade losses continue long run trends that began before the short-term disruption during the pandemic. Post-Great Recession Retail Trade employment peaked at 194,400 in late-2015 and has steadily contracted since. Retail Trade was among the most heavily impacted by the COVID-

19 lockdowns, from February 2020 to April 2020, and the industry fell by from 170,000 to 131,000 jobs. The industry bounced back to over 160,000 by August 2020 and peaked at 175,000 by December 2021. In subsequent years, Retail trade edged down and has ranged between 163,000 and 173,000. The two-year projections expect the industry to decline slightly to 163,284, down 1,489 or -0.9%.²

The Information industry sector comprises industries such as Motion Picture and Sound Recording Industries, Publishing (from newspapers to software publishers), Broadcasting and Content Providers (including streaming services), Telecommunications, Data Processing, and Libraries. The largest losses are projected to occur in Telecommunications (NAICS 517), down 273 or -4.8%

and Motion Picture & Sound Recording Industries (NAICS 512), down 198 or -5.5%. Two component industries are projected to gain employment over two years, Computing Infrastructure Providers, Data Processing, Web Hosting, & Related Services (NAICS 518) is projected to have an employment gain of 101 or +2.3% over two years and Web Search Portals, Libraries, Archives, & Other Information Services (NAICS 519) is projected to increase by 49 or +1.7% over two years.

Like Retail Trade, the 3.8% projected decline in Utilities continues a long-term trend that began years before the 2020 recession. Utilities has steadily lost employment since at least 2001, when annual statewide employment was 9,255. It fell from 8,572 in 2005 to 6,671 in 2006 and has subsequently

stabilized around 5,000-5,100 from 2020 to 2024. The projections suggest the industry will shed 201 jobs (-3.9%) over the two-year period ending 2026Q2. Within this industry, most of the projected decline will occur within two specific SOC occupational employment groups, Other Installation, Maintenance, & Repair Occupations (-55 or -4.2%) and Plant and System Operators (-36 or -6.0%).

Projections by Occupation

The occupational distribution of projected growth reflects the projected industry growth, with the top four occupational sectors accounting for 30% of base quarter employment and 38% of the projected 38,569 two-year employment growth. The top four growth sectors are Management (+4,131), Educational Instruction &

Figure 2

53-0000	Transportation and Material Moving Occupations	129,340	132,695	3,355	2.6%	37,032

Library Occupations (+3,928), Transportation & Material Moving (+3,355), and Food Prep. & Serving Occupations (+3,270). Total openings measure both the change in employment and the dynamic nature of the labor market. Total openings are the sum of net change, transfers, and labor force exits. Net change is the aforementioned overall employment change. Transfers are workers who permanently leave an occupation and transfer to another. Labor force exits are workers that leave an occupation and exit the labor force, most commonly retiring older workers.3 Across all occupations, there are projected to be over 439,000 total openings during the two-year projections period as is shown in Figure 2. The table also highlights that there are projected to be thousands of job openings in all occupational groups, including those that are projected to have slight top-line net change or even a decline over the two-year period.

Management Occupations (SOC-11) represent the group with the largest projected two-year growth through 2025Q2. This group is projected to increase by 4,131 (+2.5%) over two years and represents employment within every industry. The three specific occupations that account for over half of this SOC-11 growth are General & Operations Managers (+867 or + 1.9%), Financial Managers (+688 or +3.4%), and Medical & Health Services Managers (+546 or +6.8%). The large percent gain of Medical & Health Service Managers reflects the projected gains within the Health Care industry, which has the highest projected industry growth in the state.

Educational Instruction and Library Occupations (SOC-25) have the second highest projected occupational growth and align with the second highest growth industry sector, Educational Services (NAICS 62). 84% of 2024Q2 SOC-25 occupational employment was within the Educational Services industry. The occupational group is projected to increase from 130,937 to 134,865 (+3,928 or +3.0%) over the two-year projections period.

Transportation & Material Moving (SOC-53) is projected to grow by 3,355 (+2.6%) over two years. 70% of this occupational group falls within three industries; Transportation & Warehousing (35%), Retail Trade (24%), and Wholesale Trade (10%). Among all industries, 66% of two-year employment growth for this occupational group is projected to occur within the Transportation & Warehousing industry.

Food Preparation and Serving Related Occupations (SOC-35) is projected to increase by 2.5% or 3,270 over two years. This occupational group has the fourth largest net increase over two years and the largest total opening of any occupation group. This group is projected to have over 53,000 total openings over two years, which reflects the higher churn/turnover for employment in this group.

Each occupation is assigned an education value based on the minimum education necessary to enter an occupation. Over the two years, 43% of job growth will be in occupations that require a bachelor's or more, 13% will be in occupations that on average require an associate's, postsecondary non-degree award, or some training beyond high school, and 44% will be in occupations that generally require a high school diploma or no educational credential. These categories are based on national averages and are by occupation, which is a broad category. There may be many jobs within an occupation that require more or less education than indicated for the occupation as a whole.

Figure 3 includes estimates of projected two-year total openings by educational attainment level. The lower educational attainment levels have proportionally more openings as they are more likely to have churn/turnover than higher educational attainment occupations. Overall, 57% of employment requires less than a Bachelor's degree, and 77% of total openings are projected for occupations requiring less than a Bachelor's.

Concluding Thoughts on the Short-Term Projections

Connecticut's short-term employment projections show that the state is expected to grow by almost 38,569 or 2.1% over the two-year period from the second quarter of 2024 to the second quarter of 2026. This projected growth rate is faster than the projections produced last year,

Figure 3

Level of Educational Attainment	2024 Q2	2026 Q2	Emp. Change	% Change	Total Openings
Total All Occupations	1,849,153	1,887,722	38,569	2.1%	439,312
No formal educational credential	361,951	367,386	5,435	1.5%	120,486
High school diploma or equivalent	672,566	684,022	11,456	1.7%	165,880
Postsecondary non-degree award	62,385	63,252	867	1.4%	14,731
Some college, no degree	125,307	128,275	2,968	2.4%	30,303
Associate's degree	38,781	40,002	1,221	3.1%	8,221
Bachelor's degree	481,164	493,729	12,565	2.6%	82,905
Master's degree	49,159	51,453	2,294	4.7%	9,285
Doctoral or professional degree	57,840	59,603	1,763	3.0%	7,501

but slower than the projections during the 2021-2023, years when the state recovered jobs lost during the 2020 COVID lockdown. The employment projections through 2026Q2 suggest the state will continue steady growth through the middle of next year. The three largest industries in the state (Health Care, Education, and Manufacturing) are projected to drive much of this growth, representing 32% of 2024Q2 base quarter employment and 41% of overall two-year net change. Preliminary April 2025 jobs from Current Employment Statistics (CES) employment estimates for the state indicate that

Connecticut is continuing to add jobs despite geopolitical and economic uncertainty due to trade negotiations and military conflicts abroad. 56% of employment growth is projected to occur in occupations that require additional education beyond a High School Diploma, while a majority of total openings are expected to occur in occupations that require a High School Diploma or have no formal educational credential, due to higher churn within those occupations. This indicates that there are projected to be employment opportunities for everyone in the state looking for

General Drift Indicators are composite measures of the four-quarter change in three coincident (Connecticut Manufacturing Production Index, nonfarm employment, and real personal income) and three leading (housing permits, manufacturing average weekly hours, and initial unemployment claims) economic variables, and are indexed so 2007 = 100.

The Philadelphia Fed's Coincident Index summarizes current economic condition by using four coincident variables: nonfarm payroll employment, average hours worked in manufacturing, the unemployment rate, and wage and salary disbursements deflated by the consumer price index (U.S. city average).

employment increased over the year.

Source: CT DOL Research Office Analysis of HWOL Data Series
The Conference Board Help Wanted OnLine Data Series (HWOL) measures the number of new, first-time online jobs and jobs reposted from the previous month for over 16,000 Internet job boards, corporate boards and smaller job sites that serve niche markets and smaller geographic areas. The data can be used as a real-time measure of labor demand. For more information go to https://www1.ctdol.state.ct.us/lmi/hwol.asp.

NOTE: More industry detail data is available for the State and its five metropolitan and two micropolitan areas at: http://www.ctdol.state.ct.us/lmi/202/covered.htm. The data published there differ from the data in the preceding tables in that they are developed from a near-universe count of Connecticut employment covered by the unemployment insurance (UI) program, while the data here is sample-based. The data drawn from the UI program does not contain estimates of employment not covered by unemployment insurance, and is lagged several months behind the current employment estimates presented here.

LABOR FORCE CONCEPTS

The civilian labor force comprises all state residents age 16 years and older classified as employed or unemployed in accordance with criteria described below. Excluded are members of the military and persons in institutions (correctional and mental health, for example).

The employed are all persons who did any work as paid employees or in their own business during the survey week, or who have worked 15 hours or more as unpaid workers in an enterprise operated by a family member. Persons temporarily absent from a job because of illness, bad weather, strike or for personal reasons are also counted as employed whether they were paid by their employer or were seeking other jobs. The unemployed are all persons who did not work, but were available for work during the survey week (except for temporary illness) and made specific efforts to find a job in the prior four weeks. Persons waiting to be recalled to a job from which they had been laid off need not be looking for work to be classified as unemployed.

For the sake of simplicity, the federal Hartford-West Hartford-East Hartford area is referred to in Connecticut DOL publications as the Hartford LMA. All Labor Market Areas (LMAs) in Connecticut except two are federally designated areas for developing labor statistics. The two nonfederal areas are Torrington-Northwest LMA and Putnam-Northeast LMA.

LABOR FORCE CONCEPTS (Continued)

The unemployment rate represents the number unemployed as a percent of the civilian labor force.

With the exception of those persons temporarily absent from a job or waiting to be recalled to one, persons with no job and who are not actively looking for one are counted as "not in the labor force".

Over the course of a year, the size of the labor force and the levels of employment undergo fluctuations due to such seasonal events as changes in weather, reduced or expanded production, harvests, major holidays and the opening and closing of schools. Because these seasonal events follow a regular pattern each year, their influence on statistical trends can be eliminated by adjusting the monthly statistics. **Seasonal Adjustment** makes it easier to observe cyclical and other nonseasonal developments.

BUSINESS STARTS AND TERMINATIONS

Registrations and terminations of business entities as recorded with the U.S. Census Bureau and the Connecticut Department of Labor (DOL) are an indication of new business formation and activity. DOL business starts include new employers which have become liable for unemployment insurance taxes during the quarter, as well as new establishments opened by existing employers. DOL business terminations are those accounts discontinued due to inactivity (no employees) or business closure, and accounts for individual business establishments that are closed by still active employers. The Census's business formations include limited liability companies, limited liability partnerships, and foreign-owned (out-of-state) and domestic-owned (in-state) corporations.

The Consumer Price Index (CPI), computed and published by the U.S. Bureau of Labor Statistics, is a measure of the average change in prices over time in a fixed market basket of goods and services. It is based on prices of food, clothing, shelter, fuels, transportation fares, charges for doctors' and dentists' services, drugs and other goods and services that people buy for their day-to-day living. The Northeast region is comprised of the New England states, New York, New Jersey and Pennsylvania.

EMPLOYMENT COST INDEX

The Employment Cost Index (ECI) covers both wages and salaries and employer costs for employee benefits for all occupations and establishments in both the private nonfarm sector and state and local government. The ECI measures employers' labor costs free from the influences of employment shifts among industries and occupations. The base period for all data is December 2005 when the ECI is 100.

GAMING DATA

Indian Gaming Payments are amounts received by the State as a result of the slot compact with the two Federally recognized tribes in Connecticut, which calls for 25 percent of net slot receipts to be remitted to the State. Indian Gaming Slots are the total net revenues from slot machines only received by the two Federally recognized Indian tribes.

HOURS AND EARNINGS ESTIMATES

Production worker earnings and hours estimates include full- and part-time employees working within manufacturing industries. Hours worked and earnings data are computed based on payroll figures for the week including the 12th of the month. Average hourly earnings are affected by such factors as premium pay for overtime and shift differential as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of weekly hours worked and hourly earnings. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

Average weekly initial claims are calculated by dividing the total number of new claims for unemployment insurance received in the month by the number of weeks in the month. A minor change in methodology took effect with data published in the March 1997 issue of the DIGEST. Data have been revised back to January 1980.

INSURED UNEMPLOYMENT RATE

Primarily a measure of unemployment insurance program activity, the insured unemployment rate is the 13-week average of the number of people claiming unemployment benefits divided by the number of workers covered by the unemployment insurance system.

LABOR FORCE ESTIMATES

Labor force estimates are a measure of the work status of people who live in Connecticut. Prepared under the direction of the U.S. Bureau of Labor Statistics, the statewide estimates are the product of a signal-plus noise model, which uses results from the Current Population Survey (CPS), a monthly survey of Connecticut households, counts of claimants for unemployment benefits, and establishment employment estimates. The 2015 LAUS Redesign includes improved timeseries models for the census divisions, states, select substate areas, and the balances of those states; an improved real-time benchmarking procedure to the national Current Population Survey (CPS) estimates; an improved smoothed seasonal adjustment procedure; and improved treatment of outliers. Non-modeled area estimation improvements include: undated Dynamic Residency Ratios (DRR): more accurate estimates for all-other employment; more accurate clude: updated Dynamic Residency Ratios (DRR); more accurate estimates for all-other employment; more accurate estimation of agricultural employment; and improved estimation of non-covered agricultural unemployment. Handbook estimation is now done at the city/town level instead of at the Labor Market Area (LMA) level in Connecticut, which better reflects local conditions. The Redesign also introduces estimation inputs from the American Community Survey (ACS) to replace inputs that were previously obtained from the decennial census long-form survey. Labor force data, reflecting persons employed by place of residence, are not directly comparable to the place-of-work industry employment series. In the labor force estimates, workers involved in labor disputes are counted as employed. The labor force data also includes agricultural workers, unpaid family workers, domestics and the self-employed. Because of these conceptual differences, total labor force employment is almost always different from nonfarm wage and salary employment.

LABOR MARKET AREAS

All Labor Market Areas (LMAs) in Connecticut except two are federally-designated areas for developing labor statistics. For the sake of simplicity, the federal Hartford-West Hartford-East Hartford area is referred to in Connecticut DOL publications as the Hartford LMA. The two nonfederal areas are Torrington-Northwest LMA and Putnam-Northeast LMA. Industry employment and labor force data estimates contained in Connecticut Department of Labor publications are prepared following the same statistical procedures developed by the U.S. Department of Labor, Bureau of Labor Statistics, whether for federally designated or state-determined areas.

NONFARM EMPLOYMENT ESTIMATES

Nonfarm employment estimates are derived from a survey of businesses to measure jobs by industry. The estimates include all full- and part-time wage and salary employees who worked during or received pay for the pay period which includes the 12th of the month. Excluded from these estimates are proprietors, self-employed workers, private household employees and unpaid family workers. In some cases, due to space constraints, all industry estimates are not shown. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

UI COVERED WAGES

UI covered wages is the total amount paid to those employees who are covered under the Connecticut's Unemployment Insurance (UI) law for services performed during the quarter. The fluctuations in the 1992-93 period reflect the effect of the changes in the tax law and the massive restructuring in the state's economy.
