It's Not Easy *Defining* Green (with apologies to Kermit the Frog)

By Patrick J. Flaherty, Economist, DOL

oncern about the environment, unstable world energy markets, a desire to find new and creative ways to grow the economy, and significant public investment have kept interest high in the definition of "green jobs." Approximately \$60 billion of the \$787 billion stimulus package passed by Congress in 2009 was devoted to green activities.1 Data available on the Governor's website show over \$200 million in grants to state agencies and another \$200 million in tax credits and grants to other entities in Connecticut in the areas of energy and the environment from the stimulus legislation.2

However, a definitive definition of "green jobs" remains elusive. As noted by the Federal Register on the March 16, 2010, "There is no widely accepted standard definition of 'green jobs." Fortunately, the lack of a consensus definition has not prevented continued research efforts in this area, the development of policies to promote the green economy, nor the efforts of those working to grow the economy in a sustainable way. Indeed the work to define green jobs can provide insight into this set of economic activities.

One such effort was made by the Workforce Information Council (WIC) which formed a Green Jobs Study Group including participation by the Connecticut Department of Labor's Office of Research. The Study Group's final report proposed the following working definition of a "green job":

"A green job is one in which the **work is essential** to products or services that improve energy efficiency, expand the use of renewable energy, or support environmental sustainability. The job involves work in any of these green economic activity categories:

- Renewable Energy and Alternative Fuels
- Energy Efficiency and Conservation
- Pollution, Waste, and Greenhouse Gas (GHG) Management, Prevention and Reduction
- Environmental Cleanup and Remediation and Waste Cleanup and Mitigation
- Sustainable Agriculture and Natural Resource Conservation
- Education, Regulation, Compliance, Public Awareness, and Training and Energy Trading."

Along with many others, this report was reviewed by the U.S. Bureau of Labor Statistics (BLS), the federal agency charged with developing and implementing the collection of new data on green jobs. The BLS plans to use two approaches to identify and count green jobs:

- 1) The *output approach*, which identifies establishments that produce green goods and services and counts the associated jobs
- 2) the process approach, which identifies establishments that use environmentally-friendly production processes and practices and counts the associated jobs.

ECONOMIC DIGEST

The Connecticut Economic Digest is published monthly by the Connecticut Department of Labor, Office of Research and the Connecticut Department of Economic and Community Development. Its purpose is to regularly provide users with a comprehensive source for the most current, up-to-date data available on the workforce and economy of the state, within perspectives of the region and nation.

The annual subscription is \$50. Send subscription requests to: *The Connecticut Economic Digest*, Connecticut Department of Labor, Office of Research, 200 Folly Brook Boulevard, Wethersfield, CT 06109-1114. Make checks payable to the Connecticut Department of Labor. Back issues are \$4 per copy. The Digest can be accessed free of charge from the DOL Web site. Articles from *The Connecticut Economic Digest* may be reprinted if the source is credited. Please send copies of the reprinted material to the Managing Editor. The views expressed by the authors are theirs alone and may not reflect those of the DOL or DECD.

Managing Editor: Jungmin Charles Joo

We would like to acknowledge the contributions of many DOL Research and DECD staff and Rob Damroth (CCT) to the publication of the Digest.

Under the output approach, "BLS has identified whether a good or service has a discernible positive impact on the environment or natural resources conservation" and identified seven economic activities: 1. renewable energy, 2. energy efficiency, 3. greenhouse gas reduction, 4. pollution reduction and cleanup, 5. recycling and waste reduction, 6. agriculture and natural resources conservation, and 7. education, compliance, public awareness, and training. These are nearly identical to the activity categories identified by the WIC study group with the addition of making recycling its own category. the BLS has identified four types of green goods and services produced by these activities: 1. Direct green goods and services (such as pollution control equipment) 2. Indirect goods and services (such as electricity produced from renewable sources) 3. Specialized inputs (such as mass transit rail cars) and 4. Distribution of green goods (examples include wholesale and retail trade services and restaurants and food services).

The BLS has proposed a list of over 550 industries where businesses that produce or distribute green goods and services are classified. However, we cannot simply call these industries "green" and count all the employees in the industry as having "green jobs" because the industries may also produce goods and services that are not considered green. What's wrong with calling every job in these industries "green"? Because it makes the

definition so broad that the word becomes almost meaningless. A quick look at the Connecticut data shows why.

In 2009, total covered employment in Connecticut averaged 1,615,437 jobs³ of which more than 625,000 or 39% were in the 556 potentially green industries identified by the BLS. Restricting the list just to those producing direct green goods and services shows nearly 121,000 jobs or 7.5%, still much higher than the portion of jobs that are green estimated by other methods.⁴ An examination of the direct industries in the "Energy Efficiency" reveals the reasons for the apparent overcount. As seen in the table below, the industry with the highest employment is "School and Employee Bus Transportation." While school bus drivers do important work, and have the responsibility for the safety of thousands of Connecticut schoolchildren every day, the job has not changed much, if at all, due to the "greening" of the economy. Or to use the words of the WIC report, it is hard to argue that the work of the bus driver, while essential to the transportation of schoolchildren, is "essential" to the products and services that improve energy efficiency, expand the use of renewable energy, or support environmental sustainability. Then why is this industry on the list at all? Because there may be some employees within this industry, for example, those who work to install pollution control equipment or convert buses to alternative fuels, who do have

Table 1. Connecticut Industries with at least some Jobs in Direct Green Goods and Services in the Energy Efficiency Category

"green jobs." But it is likely that these employees are only a small portion of the overall workforce in this industry.

So how will we know how many jobs in these industries really are green? The BLS will be conducting a survey of businesses in these industries to determine what portion of the industries' jobs should be classified as "green" based on the portion of revenue generated by green goods and services within an industry. This approach is similar to that taken by the U.S. Department of Commerce's Economics and Statistics Administration (ESA) in a report published in April. Using data from the 2007 Economic Census,⁵ The ESA examined 22,000 product and service codes and identified 497 as green under a narrow definition (near unanimous consensus that these products are green) and 732 under a broader definition (which includes products and services where there is some disagreement). These green products and services fall into five categories:

- Pollution Control
- Renewable/Alternative Energy
- Energy Conservation
- Resource Conservation
- Environmental Assessment

The economic census includes dollar values of shipments and receipts - so the value of these green products and services can be directly determined. Employment is estimated by industry along the same proportions as the value of the shipments/receipts of the green products and services. The result is that the number of green jobs is around 1.8 million under the narrow definition and 2.4 million under the broad definition, about 1.5% to 2.0% of total private employment - a number that is consistent with studies conducted in other states and nationally by reputable academic institutions and research organizations.

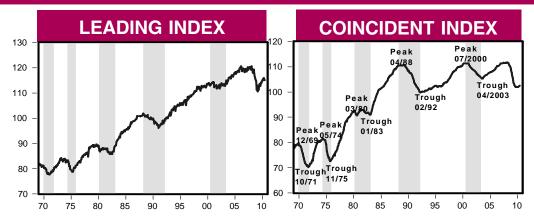

Both the BLS industry approach and the ESA study examine the product or service and determine "greenness" based on the product or service being produced, not how it was made. What about the process approach? Part of the greening of the economy is that businesses can take measures to reduce any impact on the environment. Those whose job it is to accomplish that goal might be said to have "green jobs" even if they aren't in a green industry. According the BLS Federal Register Notice "Environmentally-friendly production processes and practices are those that reduce the environmental or natural resources impact resulting

from production of any good or service." The BLS plans to survey businesses to find out whether they use environmentally-friendly processes and if so whether there are workers whose primary duties are related to these tasks. What this survey will find and how the jobs will be quantified remain to be determined, but the results will likely boost the estimates of the number of green jobs. While there will be some overlap - producers of green products and services who also employ workers to help make the production process itself greener - process approach employees can occur in any industry, not just those identified as green.

Another approach has been taken by O*NET, the Occupational Information Network, a program sponsored by the U.S. Department of Labor's Employment and Training Administration. In its February 2009 report, "Greening of the World of Work," O*NET identified occupations affected by the greening of the economy in three categories: Green Increased Demand Occupations, Green Enhanced Skills Occupations, and Green New and Emerging Occupations (See tables 2 and 3 above).

"Green Increased Demand Occupations" are existing occupations where employment demand will increase due to green economy activities. Examples include a variety of occupations: electricians, carpenters, chemists, architectural drafters, and hydrologists. "Green Enhanced Skills Occupations" are existing occupations where the work or work requirements (such as credentials) may be changed due to green economy activities. Again, a variety of occupations fall into this category including aerospace engineers, construction laborers, financial analysts and landscape architects. Green New and Emerging Occupations are ones where there are unique work and worker requirements due to the greening economy and the creation of a new occupation. Examples include solar energy systems engineers and sustainability specialists.

The distance from peak to trough, indicated by the shaded areas, measures the duration of an employment cycle recession. The vertical scale in both charts is an index with 1992=100. Source: Connecticut Department of Economic and Community Development

Mixed Signals + More Uncertainty = Slow Recovery

The National Outlook

After five months of job gains this year, as large as 432,000 in May, total nonfarm employment declined for a second month by 131,000 jobs in July following a downward revised 221,000 jobs lost (from -125,000) in June. The July unemployment rate at 9.5% was unchanged. Private sector employment for the seventh consecutive month edged up 71,000 jobs in July for a gain of 630,000 jobs this year, though the broader measure of unemployment (U6) remained at 16.5% with 14.6 million Americans out of work (44% for six months or longer). Still, manufacturing added 183,000 jobs this year, the most robust seven months of manufacturing growth in over a decade. U.S. Real Gross Domestic Product (RGDP) grew 2.4% in Q2-2010 compared with -2.6% for CY 2009, and 3.7% for Q1-2010.

Connecticut

The DECD-ECRI Connecticut coincident employment index is a measure of contemporaneous activity and decreased from 102.7 in June 2009 to 102.5 in June 2010. Total employment (from the household survey) declined year-to-year (YOY) in June by 13,457 persons (-0.8%). Nonfarm employment (from the employer survey) declined by 1,600 jobs (-0.098%) YOY. The YOY total unemployment rate rose to 8.8% from 8.4%. The insured unemployment rate improved,

declining 0.79 percentage point YOY to 4.33% in June.

On a month-over-month (MOM) basis, the June 2010 coincident employment index was unchanged at 102.5. Total employment declined in June by 7,000 persons (-0.41%) compared with May. The insured unemployment rate that decreased from 4.43% to 4.33% and nonfarm employment that increased by 500 jobs (+0.03%) continued a sixth consecutive MOM gain since the recession began. These and the total unemployment rate that decreased in June by 0.1 percentage point to 8.8% contributed positively to the MOM change in this index.

The DECD-ECRI Connecticut leading employment index that estimates future economic activity increased from 113.1 a year ago to 115.0 in June 2010. The manufacturing sector that lost 2,700 jobs (-1.6%) and construction that lost 3,900 jobs (-6.9%) YOY negatively influenced the YOY change in this index. Manufacturing average weekly hours increased from 38.8 to 39.6 YOY and construction average weekly hours increased from 36.5 to 37.2 YOY. Other positive contributors were short duration unemployment that decreased from 2.92% to 2.25% YOY, Moody's Baa bond rate that improved from 7.50% a year ago to 6.23%, and initial claims that decreased by 19.5% to 23,898 in June. Housing permits that fell 41.6% YOY from 327 units to 191 units. The Hartford Help-Wanted

Index was unchanged from a year ago at 2 in June 2010.

On a month-over-month basis, Connecticut's leading employment index declined from 115.6 in May 2010 to 115.0 in June. Housing permits that decreased from 222 units to 191 units (-14.0%), Moody's Baa bond rate that increased by 0.18 percentage point from 6.05% to 6.23%, initial claims that increased from 22,711 to 23,899 (5.2%) and average weekly hours in manufacturing that decreased from 39.8 to 39.6 contributed negatively to the MOM change in this index. Average weekly hours in construction that increased from 36.8 to 37.2 MOM had a positive influence. The short duration unemployment rate at 2.25% and the help-wanted advertising index at 2 in June were unchanged.

The national and state economic recoveries have slowed. In addition to Connecticut's insignificant job growth, the decline in the state's housing permits, a 22% residential foreclosure rate in Connecticut (ranking it 20th highest in filings per household) and near-record bank repossessions (up nationally YOY for the eighth consecutive month) create drag on the state's recovery. The state's budget challenges ahead requiring adjustment may further slow the Connecticut recovery next year. Uncertainty about health care and financial reform as well as personal finances contributes to the lack of movement out of the trough.

By Stan McMillen, Ph.D., Managing Economist, DECD, (860) 270-8166. Mark Prisloe, Associate Economist, DECD, provides research assistance. Professors Pami Dua and Stephen M. Miller, in cooperation with Anirvan Banerji at the Economic Cycle Research Institute developed the leading and coincident employment indexes. The views expressed herein are the author's own and do not necessarily represent those of the Connecticut Department of Labor or the Connecticut Department of Economic and Community Development. Components of the indexes are described in the Technical Notes on page 23.

--Continued from page 3--

Looking at Connecticut's occupational profile shows that the greening of the economy has the potential to affect workers at every level of the economy.

Workers with general skills, such as Customer Service Representatives and Laborers will see new employment opportunities in companies producing and selling green products and services. Other workers will find that employment in the green economy will require new skills and knowledge: Management teams in companies throughout the economy will increasingly include sustainability officers which will require all of the general management skills plus knowledge of sustainable business practices. Finally Connecticut's workforce may be well positioned to take advantage of some of the new and emerging occupations identified by O*NET. For example, professionals with expertise and experience in the financial services industry may find opportunities as the market for carbon credits develops.

Almost by definition, the green jobs associated with new and emerging occupations are not here yet. While some workers will find opportunities in the green economy, these may not develop fast enough to reduce the unemployment rate significantly. As the ESA report stated, "The green economy is in a position to grow quickly, but the relatively small size of the green economy suggests that a majority of the jobs that will be created during this recovery are likely to come from the production of products and services outside the green economy."

Nevertheless, any sector of the economy that is in a position to grow deserves attention, particularly with the unemployment rate near 9%. The growth of the green economy will create new opportunities for workers in a wide range of industries and occupations. With regard to definitions, as one professional involved with measuring the green economy said, definition of "green jobs" is intrinsically iterative. Research efforts will inform programs to support the green economy, and as the green economy develops and changes, the focus of research efforts (and the definitions used) will change as well. But progress need not wait, in fact cannot wait, for THE definition of "green jobs."

Connecticut is not waiting but is working as part of an eight-state consortium of northeast states to develop a new approach to identifying green jobs that goes beyond job titles and keywords by also examining the job descriptions of job openings for skills and knowledge associated with green activities. Information about the skills and knowledge needed by the green economy can then be used in designing educational and training programs to ensure that the workforce is ready to meet the demands of the green economy.

The Connecticut Economy's **General Drift Indicators** are composite measures of the four-quarter change in three coincident (Connecticut Manufacturing Production Index, nonfarm employment, and real personal income) and four leading (housing permits, manufacturing average weekly hours, Hartford help-wanted advertising, and initial unemployment claims) economic variables, and are indexed so 1986 = 100.

The **Farmington Bank Business Barometer** is a measure of overall economic growth in the state of Connecticut that is derived from non-manufacturing employment, real disposable personal income, and manufacturing production.

The Philadelphia Fed's Coincident Index summarizes current economic condition by using four coincident variables: nonfarm payroll employment, average hours worked in manufacturing, the unemployment rate, and wage and salary disbursements deflated by the consumer price index (U.S. city average).

BUSINESS AND ECONOMIC NEWS

Demographics of multiple jobholding

In 2009, the multiple jobholding rate—the proportion of total employment made up of workers who held more than one job—was 5.2 percent, below the levels recorded during the mid-1990s. Among most of the major demographic groups, "moonlighting" has become less common in recent years compared with the mid-to-late 1990s. The multiple jobholding rate reached its most recent peak (6.2 percent) during 1995-96. The rate began to recede and declined to 5.3 percent by 2002. From 2003 to 2007, the multiple jobholding rate held steady and never returned to its high. Since the start of the most recent recession in December 2007, the multiple jobholding rate has hovered around 5 percent. Multiple jobholding rates for most of the major demographic groups—men, women, Whites, and Blacks—have exhibited a similar pattern over the 1994-2009 period. During the 1990s and early 2000s, the multiple jobholding rates of men and women were similar, but since 2002, the gap in rates between men and women has widened as men have worked multiple jobs at a lower rate than women have. In 2009, the multiple jobholding rate for women (5.6 percent) was higher than that for men (4.8 percent). Among the major race and ethnic groups, Whites were most likely to hold more than one job. In 2009, the multiple jobholding rate for Whites was 5.4 percent, while the rates for Blacks and Hispanics were 4.8 percent and 3.3 percent, respectively. The rate for Asians was 3.2 percent. These data are from the Current Population Survey program. To learn more, see "Multiple jobholding during the 2000s" (PDF), in the Monthly Labor Review, July 2010. Multiple jobholders are those persons who report that they are wage or salary workers who hold two or more jobs, self-employed workers who also hold a wage or salary job, or unpaid family workers who also hold a wage or salary job. NOTE: More industry detail data is available for the State and its nine labor market areas at: http:// www.ctdol.state.ct.us/lmi/202/covered.htm. The data published there differ from the data in the preceding tables in that they are developed from a near-universe count of Connecticut employment covered by the unemployment insurance (UI) program, while the data here is sample-based. The data drawn from the UI program does not contain estimates of employment not covered by unemployment insurance, and is lagged several months behind the current employment estimates presented here.

BUSINESS AND EMPLOYMENT CHANGES ANNOUNCED IN THE NEWS MEDIA

- In July 2010, Pieper Memorial Veterinary Hospital in Middletown completed a planned expansion, adding 30 new jobs. ESPN of Bristol has broken ground on a new day-care center, which will create 55 jobs. Nestle Waters N.A., has received a state loan and will move from Greenwich to Stamford, creating 25 additional jobs. The renovation of the Westfield Trumbull Mall has generated 100 construction jobs. Tractor Supply Co. will open a store in Stonington employing 12 to 17 workers. The City of Hartford is hiring 90 police officers, firefighters and parks workers.
- In July 2010, the regional U.S. Census offices in Norwich and Bridgeport disclosed that they will begin winding down operations, resulting in 1,500 job cuts. Wood Group will lay off 90 workers at its plant in East Windsor that repairs gas turbine engine components. St. Francis Hospital & Medical Center in Hartford will lay off 200 employees.

Business & Employment Changes Announced in the News Media lists start-ups, expansions, staff reductions, and layoffs reported by the media, both current and future. The report provides company name, the number of workers involved, date of the action, the principal product or service of the company, a brief synopsis of the action, and the source and date of the media article. This publication is available in both HTML and PDF formats at the Connecticut Department of Labor Web site, http://www.ctdol.state.ct.us/lmi/busemp.htm.

All Labor Market Areas(LMAs) in Connecticut except three are federally-designated areas for developing labor statistics. For the sake of simplicity, the federal Bridgeport-Stamford-Nonwalk NECTA is referred to in Connecticut DOL publications as the 'Bridgeport-Stamford LMA', and the Hartford-West Hartford-East Hartford NECTA is referred to as the 'Hartford LMA'. The Bureau of Labor Statistics has identified 17 towns in the northwest part of the State as a separate area for reporting labor force data. For the convenience of our data users, these towns are included in the Torrington LMA. For the same purpuse, five towns which are part of the Springfield, MA area are published as the 'Enfield LMA'. Similarly the towns of Putnam, Thompson and Woodstock (part of the Worcester, MA area), plus four towns estimated separately are included in the Willimantic-Danielson LMA.

LABOR FORCE CONCEPTS

The **civilian labor force** comprises all state residents age 16 years and older classified as employed or unemployed in accordance with criteria described below. Excluded are members of the military and persons in institutions (correctional and mental health, for example).

The **employed** are all persons who did any work as paid employees or in their own business during the survey week, or who have worked 15 hours or more as unpaid workers in an enterprise operated by a family member. Persons temporarily absent from a job because of illness, bad weather, strike or for personal reasons are also counted as employed whether they were paid by their employer or were seeking other jobs.

The **unemployed** are all persons who did not work, but were available for work during the survey week (except for temporary illness) and made specific efforts to find a job in the prior four weeks. Persons waiting to be recalled to a job from which they had been laid off need not be looking for work to be classified as unemployed.

LABOR FORCE CONCEPTS (Continued)

The unemployment rate represents the number unemployed as a percent of the civilian labor force.

With the exception of those persons temporarily absent from a job or waiting to be recalled to one, persons with no job and who are not actively looking for one are counted as "not in the labor force".

Over the course of a year, the size of the labor force and the levels of employment undergo fluctuations due to such seasonal events as changes in weather, reduced or expanded production, harvests, major holidays and the opening and closing of schools. Because these seasonal events follow a regular pattern each year, their influence on statistical trends can be eliminated by adjusting the monthly statistics. **Seasonal Adjustment** makes it easier to observe cyclical and other nonseasonal developments.

by the U.S. Department of Labor, Bureau of Labor Statistics.

For further information on the housing permit data, contact Kolie Sun of DECD at (860) 270-8167.

BUSINESS STARTS AND TERMINATIONS

Registrations and terminations of business entities as recorded with the Secretary of the State and the Connecticut Department of Labor (DOL) are an indication of new business formation and activity. DOL business starts include new employers which have become liable for unemployment insurance taxes during the quarter, as well as new establishments opened by existing employers. DOL business terminations are those accounts discontinued due to inactivity (no employees) or business closure, and accounts for individual business establishments that are closed by still active employers. The Secretary of the State registrations include limited liability companies, limited liability partnerships, and foreignowned (out-of-state) and domestic-owned (in-state) corporations.

CONSUMER PRICE INDEX

The Consumer Price Index (CPI), computed and published by the U.S. Bureau of Labor Statistics, is a measure of the average change in prices over time in a fixed market basket of goods and services. It is based on prices of food, clothing, shelter, fuels, transportation fares, charges for doctors' and dentists' services, drugs and other goods and services that people buy for their day-to-day living. The Northeast region is comprised of the New England states, New York, New Jersey and Pennsylvania.

EMPLOYMENT COST INDEX

The Employment Cost Index (ECI) covers both wages and salaries and employer costs for employee benefits for all occupations and establishments in both the private nonfarm sector and state and local government. The ECI measures employers' labor costs free from the influences of employment shifts among industries and occupations. The base period for all data is June 1989 when the ECI is 100.

HOURS AND EARNINGS ESTIMATES

Production worker earnings and hours estimates include full- and part-time employees working within manufacturing industries. Hours worked and earnings data are computed based on payroll figures for the week including the 12th of the month. Average hourly earnings are affected by such factors as premium pay for overtime and shift differential as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of weekly hours worked and hourly earnings. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

INDIAN GAMING DATA

Indian Gaming Payments are amounts received by the State as a result of the slot compact with the two Federally recognized tribes in Connecticut, which calls for 25 percent of net slot receipts to be remitted to the State. Indian Gaming Slots are the total net revenues from slot machines only received by the two Federally recognized Indian tribes.

INITIAL CLAIMS

Average weekly initial claims are calculated by dividing the total number of new claims for unemployment insurance received in the month by the number of weeks in the month. A minor change in methodology took effect with data published in the March 1997 issue of the DIGEST. Data have been revised back to January 1980.

INSURED UNEMPLOYMENT RATE

Primarily a measure of unemployment insurance program activity, the insured unemployment rate is the 13-week average of the number of people claiming unemployment benefits divided by the number of workers covered by the unemployment insurance system.

LABOR FORCE ESTIMATES

Labor force estimates are a measure of the work status of people who live in Connecticut. Prepared under the direction of the U.S. Bureau of Labor Statistics, the statewide estimates are the product of a signal-plus noise model, which uses results from the Current Population Survey (CPS), a monthly survey of Connecticut households, counts of claimants for unemployment benefits, and establishment employment estimates. Beginning with the publication of January 2005 data, an improved methodology is being used to develop labor force estimates, by which monthly state model-based employment and unemployment estimates are controlled to add to the national CPS levels. This will ensure that national economic events are reflected in the state estimates, and it will significantly reduce end-of-year revisions. (For more information, please see the Connecticut Economic Digest, December 2004 issue.) Labor force data, reflecting persons employed by place of residence, are not directly comparable to the place-of-work industry employment series. In the labor force estimates, workers involved in labor disputes are counted as employed. The labor force data also includes agricultural workers, unpaid family workers, domestics and the self-employed. Because of these conceptual differences, total labor force employment is almost always different from nonfarm wage and salary employment.

LABOR MARKET AREAS

All Labor Market Areas (LMAs) in Connecticut except three are federally-designated areas for developing labor statistics. For the sake of simplicity, the federal Bridgeport-Norwalk-Stamford Metropolitan Statistical Area (MSA) is referred to in Connecticut Department of Labor publications as the Bridgeport-Stamford LMA, and the Hartford-West Hartford-East Hartford MSA is called the Hartford LMA. The Bureau of Labor Statistics has identified the 17 towns in the in the northwestern part of the state as a separate area for reporting labor force data. For the convenience of our data users, data for these towns are included in the Torrington LMA. For the same purpose, data for the towns of East Windsor, Enfield, Somers, Suffield and Windsor Locks, which are officially part of the Springfield MSA, are published as the Enfield LMA. Similarly, the towns of Putnam, Thompson and Woodstock - part of the Worcester MSA - are included in the Willimantic-Danielson LMA. Also, data for Westerly, Rhode Island are included in the Norwich-New London LMA. Industry employment and labor force data estimates contained in Connecticut Department of Labor publications are prepared following the same statistical procedures developed by the U.S. Department of Labor, Bureau of Labor Statistics, whether for federally designated or state-determined areas.

LEADING AND COINCIDENT EMPLOYMENT INDICES

The leading employment index is a composite of six individual largely employment-related series -- the average workweek of manufacturing production and construction workers, Hartford help-wanted advertising index, short-duration (less than 15 weeks) unemployment rate, initial claims for unemployment insurance, total housing permits, and Moody's BAA corporate bond yield. While not employment-sector variables, housing permits are closely related to construction employment and the corporate bond yield adds important information about the movement in interest rates. The coincident employment index is a composite indicator of four individual employment-related series -- the total unemployment rate, nonfarm employment (employer survey), total employment (state residents employed measured by a household survey), and the insured unemployment rate. All data are seasonally adjusted and come from the Connecticut Labor Department, the Federal Reserve Bank of Boston, and the Board of Governors of the Federal Reserve System.

NONFARM EMPLOYMENT ESTIMATES

Nonfarm employment estimates are derived from a survey of businesses to measure *jobs* by industry. The estimates include all full- and part-time wage and salary employees who worked during or received pay for the pay period which includes the 12th of the month. Excluded from these estimates are proprietors, self-employed workers, private household employees and unpaid family workers. In some cases, due to space constraints, all industry estimates are not shown. Call (860) 263-6275 for a more comprehensive breakout of nonfarm employment estimates. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

UI COVERED WAGES

UI covered wages is the total amount paid to those employees who are covered under the Connecticut's Unemployment Insurance (UI) law for services performed during the quarter. The fluctuations in the 1992-93 period reflect the effect of the changes in the tax law and the massive restructuring in the state's economy.
