Connecticut Town Economic Indexes Grew in 2023

By Jungmin Charles Joo and Dana Placzek, Department of Labor

Connecticut's overall economy grew last year with nearly all towns seeing increases. Fully 136 of Connecticut's 169 cities and towns were above pre-COVID-19 pandemic (2019) levels in 2023. The indexes on page 3 give a broad measure of business and resident economic well-being of each town, allowing comparisons among them.

The CTEI Methodology

The Connecticut Town Economic Indexes (CTEI) were introduced in 2015 and are released annually. The Connecticut Department of Labor's Office of Research developed the composite indexes of all 169 municipalities in the state to measure each town or city's overall economic health, which then can be ranked and compared to others to gain perspective. The four annual average town economic indicators used as components are total covered business establishments, total covered employment, inflation-adjusted covered annual average wages, and the unemployment rate.

Establishments are the physical work units located in the municipality. Employment is the number of payroll employees in establishments that are located in

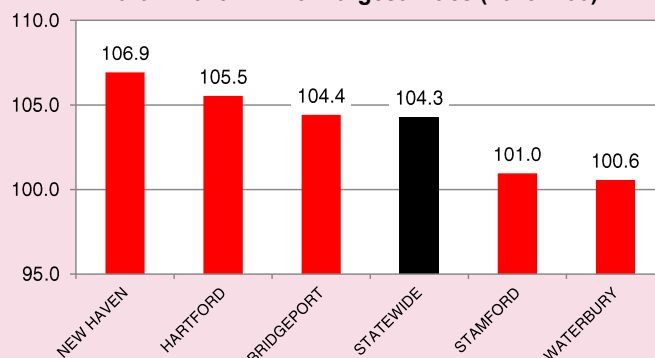

the town. Wages are the aggregate payroll pay divided by the total average employment. These three measures come from the Quarterly Census of Employment and Wages (QCEW) program and include all those who are covered under unemployment insurance law, thus capturing nearly 100 percent of all payroll employees in each town.

Establishments, employment and wages are proxy for each municipality's business activities and its overall economic strength, while the unemployment rate measures the overall economic health of its residents. Each of the four components was given a 25 percent weight. To compare the economic performance since the pandemic of 2020, the CTEI's base year is changed from 2010 to 2019, which equals 100. The wage component was also adjusted to 2019 dollars and unemployment rate changes were inverted to reflect the right economic direction. By combining these four major economic indicators, the index allows comparisons among towns.

CTEI: 2022 to 2023

Most of the cities and towns saw business and labor market conditions continue to improve.

Chart 1. 2023 CTEI of Largest Cities (2019=100)

The Connecticut Economic Digest is published monthly by the Connecticut Department of Labor, Office of Research, and the Connecticut Department of Economic and Community Development. Its purpose is to regularly provide users with a comprehensive source for the most current, up-to-date data available on the workforce and economy of the state, within perspectives of the region and nation.

The annual subscription is \$50. Send subscription requests to: **The Connecticut Economic Digest**, Connecticut Department of Labor, Office of Research, 200 Folly Brook Boulevard, Wethersfield, CT 06109-1114. Make checks payable to the Connecticut Department of Labor. Back issues are \$4 per copy. The Digest can be accessed free of charge from the DOL Web site. Articles from **The Connecticut Economic Digest** may be reprinted if the source is credited. Please send copies of the reprinted material to the Managing Editor. The views expressed by the authors are theirs alone and may not reflect those of the DOL or DECD.

Because the town sizes can vary greatly, a same change in one index value of a small town would not necessarily mean the same degree of economic growth as a large city. Therefore, the comparisons were grouped in three categories: towns with a population (2023) under 25,000, towns or cities with a population between 25,000 and 100,000, and cities with over 100,000.

Among the towns with a population under 25,000, Eastford and Hartland's overall economy expanded the fastest from 2022 to 2023. Enfield and Groton had the two fastest increases over the year among the towns or cities with a population between 25,000 and 100,000, while Westport and South Windsor indexes had slight declines but remained well above 2021 levels. All five largest cities with a population of 100,000 or more experienced overall economic growth over the year, with New Haven and Hartford faring the best.

CTEI: 2019 to 2023

When compared with 2019, before the pandemic downturn, 136 cities and towns' indexes showed increases in 2023, while 33 declined. Among the small towns with residents fewer than 25,000, Andover and Lyme experienced the fastest economic increase between 2019 and 2023. Conversely, Ledyard and Union are still below 2019 levels despite strong gains in 2023. Fairfield and Greenwich index figures grew the fastest among those with a population between 25,000 and 100,000, while Norwalk and Mansfield have yet to return to pre-pandemic levels after gains in 2021 and 2022.

Among the largest cities (population over 100,000), as Chart 1 shows, New Haven and Hartford's economy grew the most since 2019. In fact, all five cities have fully recovered to pre-pandemic levels. The map on page 4 shows the different ranges of economic recovery rate of each municipality in the state.

LMA Indexes: 2019-2023

The index by Labor Market Area (LMA) is the average of all town indexes that make up that labor market area. The index in all nine regions in Connecticut grew from

2019 to 2023. The Danielson-Northeast and Torrington-Northwest areas' overall economy continued to grow the fastest.

The Components of CTEI:

Establishments

The total number of business establishments in Connecticut rose by 4.9% to 149,796 in 2023, slower growth than the 6.6% from the year before. Stamford continued to dominate, with the largest number of businesses (7,280) of the 169 cities and towns. Since 2019, Connecticut's overall number of businesses increased 21.8%. Overall, 93% of the total municipalities added new establishments over the year, and 98% since 2019.

Employment

Last year's average statewide employment grew further by 1.6%, after having risen 3.2% in 2022. About 74% of the cities and towns in the state experienced job recovery over the year, after 92% added jobs in 2022. All in all, half of the municipalities in the state have added jobs since 2019, while the statewide annual average employment in 2023 was slightly (-0.1%) below the 2019 level.

Real Wages

In 2023, 74 of all cities and towns in the state posted inflation-adjusted (in 2019 dollar) wage gains over the year, significantly up from 35 in 2022 when inflation was much higher than in 2023. While lower, inflation continued to cut into wage gains in 2023. The statewide real annual average wage was \$70,289 per worker, a 1.0% decline over 2022 but up 0.7% from 2019. The highest real average wages were in businesses located in Greenwich at \$166,653 last year.

Unemployment Rate

Waterbury posted the highest unemployment rate (5.9%) last year, dipping from 6.2% in 2022. Overall, the statewide rate fell from 4.1% in 2022 to 3.8% in 2023. For a detailed analysis and the complete table of unemployment rates for all 169 municipalities, see "Most Towns Experienced Decreases in the Unemployment Rate in 2023" in

Connecticut Town Economic Indexes, 2023

Chart 2. CTEI (2019=100) Diffusion Index, 2006-2023

-continued from page 2-

the June 2024 issue of the Connecticut Economic Digest.

CTEI Diffusion Index: 2006-2023

One way to measure aggregate performance of the CTEI of 169 cities and towns in Connecticut is to use a diffusion index. For each town, the index figure is up, down, or unchanged over the year. The diffusion index is calculated by subtracting the share of towns that

experienced decreases in their indexes from the share that had increases over the year.

As expected, during the 2008-2010 period, the index values were -98, -100, and -75, respectively, when Connecticut was in an employment downturn. The state economy gradually recovered from 2011, as the diffusion index

numbers indicate on Chart 2, and by 2015 nearly all towns were gaining (+96). The index remained at or above 80 from 2014 to 2019, before falling to -100 in 2020, when all 169 cities and towns' economies were inexorably affected by the pandemic. Then after the index almost fully turning around with +98 in 2021, the index hit 100 in 2022 when all towns gained as the state continued to bounce back from the pandemic. Last year the index was +93 as the economy returned to a more normal pace of growth. So far in 2024 Connecticut has seen continued job growth, low unemployment, and wage gains that have outpaced inflation. While there are ongoing uncertainties at the national and international levels that could affect Connecticut and its towns, Connecticut saw widespread growth in 2023 and all indicators suggest this is continuing in 2024. ■

General Drift Indicators are composite measures of the four-quarter change in three coincident (Connecticut Manufacturing Production Index, nonfarm employment, and real personal income) and three leading (housing permits, manufacturing average weekly hours, and initial unemployment claims) economic variables, and are indexed so 2007 = 100.

The **Philadelphia Fed's Coincident Index** summarizes current economic condition by using four coincident variables: nonfarm payroll employment, average hours worked in manufacturing, the unemployment rate, and wage and salary disbursements deflated by the consumer price index (U.S. city average).

Total nonfarm
employment increased
over the year.

Source: CT DOL Research Office Analysis of HWOL Data Series

The Conference Board Help Wanted OnLine Data Series (HWOL) measures the number of new, first-time online jobs and jobs reposted from the previous month for over 16,000 Internet job boards, corporate boards and smaller job sites that serve niche markets and smaller geographic areas. The data can be used as a real-time measure of labor demand. For more information go to <https://www1.ctdol.state.ct.us/lmi/hwol.asp>.

NOTE: More industry detail data is available for the State and its nine labor market areas at: <http://www.ctdol.state.ct.us/lmi/202/covered.htm>. The data published there differ from the data in the preceding tables in that they are developed from a near-universe count of Connecticut employment covered by the unemployment insurance (UI) program, while the data here is sample-based. The data drawn from the UI program does not contain estimates of employment not covered by unemployment insurance, and is lagged several months behind the current employment estimates presented here.

All Labor Market Areas (LMAs) in Connecticut except three are federally-designated areas for developing labor statistics. For the sake of simplicity, the federal Bridgeport-Stamford-Norwalk NECTA is referred to in Connecticut DOL publications as the Bridgeport-Stamford LMA, and the Hartford-West Hartford-East Hartford NECTA is the Hartford LMA. The northwest part of the state is now called Torrington-Northwest LMA. Five towns which are part of the Springfield, MA area are published as the Enfield LMA. The towns of Eastford and Hampton and other towns in the northeast are now called Danielson-Northeast LMA.

LABOR FORCE CONCEPTS

The **civilian labor force** comprises all state residents age 16 years and older classified as employed or unemployed in accordance with criteria described below. Excluded are members of the military and persons in institutions (correctional and mental health, for example).

The **employed** are all persons who did any work as paid employees or in their own business during the survey week, or who have worked 15 hours or more as unpaid workers in an enterprise operated by a family member. Persons temporarily absent from a job because of illness, bad weather, strike or for personal reasons are also counted as employed whether they were paid by their employer or were seeking other jobs. The **unemployed** are all persons who did not work, but were available for work during the survey week (except for temporary illness) and made specific efforts to find a job in the prior four weeks. Persons waiting to be recalled to a job from which they had been laid off need not be looking for work to be classified as unemployed.

LABOR FORCE CONCEPTS (Continued)

The **unemployment rate** represents the number unemployed as a percent of the civilian labor force.

With the exception of those persons temporarily absent from a job or waiting to be recalled to one, persons with no job and who are not actively looking for one are counted as "not in the labor force".

Over the course of a year, the size of the labor force and the levels of employment undergo fluctuations due to such seasonal events as changes in weather, reduced or expanded production, harvests, major holidays and the opening and closing of schools. Because these seasonal events follow a regular pattern each year, their influence on statistical trends can be eliminated by adjusting the monthly statistics. **Seasonal Adjustment** makes it easier to observe cyclical and other nonseasonal developments.

BUSINESS STARTS AND TERMINATIONS

Registrations and terminations of business entities as recorded with the U.S. Census Bureau and the Connecticut Department of Labor (DOL) are an indication of new business formation and activity. DOL business starts include new employers which have become liable for unemployment insurance taxes during the quarter, as well as new establishments opened by existing employers. DOL business terminations are those accounts discontinued due to inactivity (no employees) or business closure, and accounts for individual business establishments that are closed by still active employers. The Census's business formations include limited liability companies, limited liability partnerships, and foreign-owned (out-of-state) and domestic-owned (in-state) corporations.

CONSUMER PRICE INDEX

The Consumer Price Index (CPI), computed and published by the U.S. Bureau of Labor Statistics, is a measure of the average change in prices over time in a fixed market basket of goods and services. It is based on prices of food, clothing, shelter, fuels, transportation fares, charges for doctors' and dentists' services, drugs and other goods and services that people buy for their day-to-day living. The Northeast region is comprised of the New England states, New York, New Jersey and Pennsylvania.

EMPLOYMENT COST INDEX

The Employment Cost Index (ECI) covers both wages and salaries and employer costs for employee benefits for all occupations and establishments in both the private nonfarm sector and state and local government. The ECI measures employers' labor costs free from the influences of employment shifts among industries and occupations. The base period for all data is December 2005 when the ECI is 100.

GAMING DATA

Indian Gaming Payments are amounts received by the State as a result of the slot compact with the two Federally recognized tribes in Connecticut, which calls for 25 percent of net slot receipts to be remitted to the State. Indian Gaming Slots are the total net revenues from slot machines only received by the two Federally recognized Indian tribes.

HOURS AND EARNINGS ESTIMATES

Production worker earnings and hours estimates include full- and part-time employees working within manufacturing industries. Hours worked and earnings data are computed based on payroll figures for the week including the 12th of the month. Average hourly earnings are affected by such factors as premium pay for overtime and shift differential as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of weekly hours worked and hourly earnings. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

INITIAL CLAIMS

Average weekly initial claims are calculated by dividing the total number of new claims for unemployment insurance received in the month by the number of weeks in the month. A minor change in methodology took effect with data published in the March 1997 issue of the DIGEST. Data have been revised back to January 1980.

INSURED UNEMPLOYMENT RATE

Primarily a measure of unemployment insurance program activity, the insured unemployment rate is the 13-week average of the number of people claiming unemployment benefits divided by the number of workers covered by the unemployment insurance system.

LABOR FORCE ESTIMATES

Labor force estimates are a measure of the work status of people who live in Connecticut. Prepared under the direction of the U.S. Bureau of Labor Statistics, the statewide estimates are the product of a signal-plus noise model, which uses results from the Current Population Survey (CPS), a monthly survey of Connecticut households, counts of claimants for unemployment benefits, and establishment employment estimates. The 2015 LAUS Redesign includes improved time-series models for the census divisions, states, select substate areas, and the balances of those states; an improved real-time benchmarking procedure to the national Current Population Survey (CPS) estimates; an improved smoothed seasonal adjustment procedure; and improved treatment of outliers. Non-modeled area estimation improvements include: updated Dynamic Residency Ratios (DRR); more accurate estimates for all-other employment; more accurate estimation of agricultural employment; and improved estimation of non-covered agricultural unemployment. Handbook estimation is now done at the city/town level instead of at the Labor Market Area (LMA) level in Connecticut, which better reflects local conditions. The Redesign also introduces estimation inputs from the American Community Survey (ACS) to replace inputs that were previously obtained from the decennial census long-form survey. Labor force data, reflecting persons employed by place of residence, are not directly comparable to the place-of-work industry employment series. In the labor force estimates, workers involved in labor disputes are counted as employed. The labor force data also includes agricultural workers, unpaid family workers, domestics and the self-employed. Because of these conceptual differences, total labor force employment is almost always different from nonfarm wage and salary employment.

LABOR MARKET AREAS

All Labor Market Areas (LMAs) in Connecticut except three are federally-designated areas for developing labor statistics. For the sake of simplicity, the federal Bridgeport-Stamford-Norwalk NECTA is referred to in Connecticut DOL publications as the Bridgeport-Stamford LMA, and the Hartford-West Hartford-East Hartford NECTA is the Hartford LMA. The northwest part of the state is now called Torrington-Northwest LMA. Five towns which are part of the Springfield, MA area are published as the Enfield LMA. The towns of Eastford and Hampton and other towns in the northeast are now called Danielson-Northeast LMA. Industry employment and labor force data estimates contained in Connecticut Department of Labor publications are prepared following the same statistical procedures developed by the U.S. Department of Labor, Bureau of Labor Statistics, whether for federally designated or state-determined areas.

NONFARM EMPLOYMENT ESTIMATES

Nonfarm employment estimates are derived from a survey of businesses to measure *jobs* by industry. The estimates include all full- and part-time wage and salary employees who worked during or received pay for the pay period which includes the 12th of the month. Excluded from these estimates are proprietors, self-employed workers, private household employees and unpaid family workers. In some cases, due to space constraints, all industry estimates are not shown. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

UI COVERED WAGES

UI covered wages is the total amount paid to those employees who are covered under the Connecticut's Unemployment Insurance (UI) law for services performed during the quarter. The fluctuations in the 1992-93 period reflect the effect of the changes in the tax law and the massive restructuring in the state's economy.
