# Covered Employment and Wages: A 2013 Annual Review

By Jonathan Kuchta, Research Analyst, DOL, jonathan.kuchta@ct.gov

he number of workers in Connecticut covered by Unemployment Insurance (UI) increased by 0.7 percent during 2013, according to most recent data published from the Quarterly Census of Employment and Wages (OCEW) program. This increase built upon the 1.0 percent increase in both 2012 and 2011. Total private industry employment, constituting 85.7 percent of the State's employment total [little changed from 2012's 85.5], increased by 1.0 percent. Government employment decreased by 0.5 percent over the year.

Average annual wages of all Connecticut workers increased by 0.2 percent to \$62,283. Private sector wages decreased slightly at 0.1 percent, to \$63,169 in 2013, while government wages increased 2.2 percent to \$56,990.

The number of business establishments expanded for the second year in a row, with a new total of 113,697, an increase of 1.6 percent over 2012. Total private establishments represented the majority of the increase, reaching 110,238 in 2013. Government worksites decreased 0.1 percent in the State, from 3,462 in 2012 to 3,459 in 2013.

#### **Employment**

Looking at the sectors with notable gains in 2013, several

sectors continued to improve and build upon their 2012 gains. The accommodation and food services, health care and social assistance, construction, and retail trade sectors all showed increases. Accommodation and food services was again the largest gainer, expanding by 3,708 jobs. Also notably showing improvement was construction, with 2,037 more jobs than in 2012.

Very few sectors declined in 2013, though they were led by finance and insurance with a loss of 2,042 and manufacturing with a drop of 1,378. The drop in finance continued the downward trend in the sector.

Due to administrative changes, some firms that had been in nondisclosable finance NAICS sub-sectors are now represented in the securities, commodity contracts and investments sub-sector, accounting for nearly all of the 2013 sub-sector increase.

The Bureau of Labor Statistics (BLS) aggregates NAICS sectors to form the top level goods-producing and service-providing "domains". Goods-producing sectors include agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing. The remaining sectors are aggregated into the service-providing domain.

-continued on page 5-

To view additional QCEW program data on a more detailed geographic level, visit the Connecticut Department of Labor's website for labor market information at http://www.ctdol.state.cu.us/lmi.

<sup>\*</sup>These data are derived from unemployment insurance program reports supplemented by other sources. The industry employment figures will differ from the monthly sample-based nonfarm employment estimates due to the differences in employment coverages and methods used to produce the data.

# THE CONNECTICUT-

The Connecticut Economic Digest is published monthly by the Connecticut Department of Labor, Office of Research, and the Connecticut Department of Economic and Community Development. Its purpose is to regularly provide users with a comprehensive source for the most current, up-to-date data available on the workforce and economy of the state, within perspectives of the region and nation.

The annual subscription is \$50. Send subscription requests to: The Connecticut Economic Digest, Connecticut Department of Labor, Office of Research, 200 Folly Brook Boulevard, Wethersfield, CT 06109-1114. Make checks payable to the Connecticut Department of Labor. Back issues are \$4 per copy. The Digest can be accessed free of charge from the DOL Web site. Articles from The Connecticut Economic Digest may be reprinted if the source is credited. Please send copies of the reprinted material to the Managing Editor. The views expressed by the authors are theirs alone and may not reflect those of the DOL or DECD.

Managing Editor: Jungmin Charles Joo Associate Editor: Sarah C. Pilipaitis

We would like to acknowledge the contributions of many DOL Research and DECD staff and Rob Damroth to the publication of the Digest.

#### -continued from page 1-

For 2013, the goodsproducing domain encompassed 13.9 percent of total covered employment, with the remaining 86.1 percent in the serviceproviding domain. The goodsproducing domain employment rose by 906, with serviceproviding employment growing by 0.8 percent, or 11,289, at the same time.

#### Wages

Connecticut average annual wages varied greatly among industries and within each sector in 2013. It should be noted that much of this difference in pay level can be attributed to factors such as hours worked (full or part-time), workforce composition, wages including bonuses or stock options, and seasonal and weather related influences.

The highest annual average wage was found in the management sector, at \$160,243, 2.5 times the State average. Last year the finance

and insurance sector averaged \$151,719, with those in securities, commodity contracts and investments earning an average of \$281,211. Overall, wages showed muted growth, with no sector showing more than 4 percent growth, though educational services at 3.8 percent was the biggest gainer.

At the other end of the spectrum, accommodation and food services earned the least, at \$19,024, which was nearly unchanged from the year prior and is heavily influenced by parttime workers. Following them were arts, entertainment and recreation at \$26,151 and agriculture, forestry, fishing and hunting at \$27,864 in annual wages.

Only the goods producing domain saw wage increases in 2013, with wages at \$74,331, a 1.9 percent increase over 2012, and a 19.3 percent premium over the statewide annual average. Service-providing wages declined slightly to \$60,341, a drop of 0.1 percent on an annual basis.

The Connecticut Economy's General Drift Indicators are composite measures of the four-quarter change in three coincident (Connecticut Manufacturing Production Index, nonfarm employment, and real personal income) and four leading (housing permits, manufacturing average weekly hours, Hartford help-wanted advertising, and initial unemployment claims) economic variables, and are indexed so 1986 = 100.

The Farmington Bank Business Barometer is a measure of overall economic growth in the state of Connecticut that is derived from non-manufacturing employment, real disposable personal income, and manufacturing production.

The Philadelphia Fed's Coincident Index summarizes current economic condition by using four coincident variables: nonfarm payroll employment, average hours worked in manufacturing, the unemployment rate, and wage and salary disbursements deflated by the consumer price index (U.S. city average).
