# **Covered Employment and Wages: A** 2015 Annual Review

By Jonathan Kuchta, Research Analyst, DOL, jonathan.kuchta@ct.gov

he number of jobs in Connecticut covered by Unemployment Insurance (UI) increased by 0.6 percent during 2015, according to most recent data published from the Quarterly Census of Employment and Wages (QCEW) program. This increase continues the trend started back in 2011. Total private industry employment, constituting 85.9 percent of the state's employment total, increased by 0.8 percent. Government employment decreased by 0.6 percent yearover-year.

Average annual wages of all Connecticut jobs increased by 2.5 percent, to \$65,526, much like in 2014. In 2015, private sector wages increased by 2.3 percent to \$66,284; government wages increased 4.0 percent to \$60,908.

The number of business establishments expanded for the fourth year in a row, with a new total of 116,246, an increase of 1.4 percent over 2014. Total private establishments represented the entirety of the increase, reaching 112,822 in 2015. Government worksites decreased 0.3 percent in the state, from 3,436 in 2014 to 3,425 in 2015.

#### **Industry Sector Employment**

Looking at the industry sectors with notable gains in 2015, several areas continued to improve from their 2014 levels. The construction, health care and social assistance, transportation and warehousing, and administrative and waste management sectors all showed solid increases. Administrative and waste management was the largest gainer last year, expanding by 2,352 jobs. Also notably showing improvement were the health care and construction sectors, with 2,010 and 2,057 more jobs than in 2014, respectively. The continued increases in construction from the post-recession lows in January 2010 remain ongoing, with just over 10,000 jobs regained since then.

Just over a third of sectors declined in 2015, though they were led by government (which includes Native American tribal government employment) with a loss of 1,397 and manufacturing with a drop of 652. Much of the loss in government was due to the job losses at the casinos; budgetary constraints will continue into the 2016 annual data. Manufacturing remains a declining sector but it has managed to slow the decline in employment from the significant loss of 4,221 jobs in 2014.

The Bureau of Labor Statistics (BLS) aggregates NAICS sectors to form the top level goods-producing and service-providing "domains." Goods-producing sectors include agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing. The remaining sectors are aggregated into the service-providing domain.

For 2015, the goods-producing domain encompassed 13.6 percent

#### \* Nondisclosable

\*\* These data are derived from unemployment insurance program reports supplemented by other sources. The industry employment figures will differ from the monthly sample-based nonfarm employment estimates due to the differences in employment coverages and methods used to produce the data.

To view additional QCEW program data on a more detailed geographic level, visit the Connecticut Department of Labor's website for labor market information at http://www.ctdol.state.cu.us/lmi.

## THE CONNECTICUT-MIC DIGEST

The Connecticut Economic Digest is published monthly by the Connecticut Department of Labor, Office of Research, and the Connecticut Department of Economic and Community Development. Its purpose is to regularly provide users with a comprehensive source for the most current, up-to-date data available on the workforce and economy of the state, within perspectives of the region and nation.

The annual subscription is \$50. Send subscription requests to: The Connecticut Economic Digest, Connecticut Department of Labor, Office of Research, 200 Folly Brook Boulevard, Wethersfield, CT 06109-1114. Make checks payable to the Connecticut Department of Labor. Back issues are \$4 per copy. The Digest can be accessed free of charge from the DOL Web site. Articles from The Connecticut Economic Digest may be reprinted if the source is credited. Please send copies of the reprinted material to the Managing Editor. The views expressed by the authors are theirs alone and may not reflect those of the DOL or DECD.

Managing Editor: Jungmin Charles Joo Associate Editor: Erin C. Wilkins

We would like to acknowledge the contributions of many DOL Research and DECD staff and Rob Damroth to the publication of the Digest.

#### -continued from page 1-

of total covered employment, with the remaining 86.4 percent in the service-providing domain. The goods-producing domain employment grew by 0.5 percent, or 1,108, while service-providing growing by 0.6 percent, or 8,169, over the year.

#### Wages

Connecticut average annual wages varied greatly between industries and within each sector in 2015. It should be noted that much of this difference in pay level can be attributed to factors such as hours worked (full or part-time), workforce composition, wages including bonuses or stock options, and seasonal and weather related influences.

The highest annual average wage was found in the finance and insurance sector, at \$165,548, 2.5 times the all industries average. Those in the securities, commodity contracts and investments sector earned an average of \$302,241 in 2015. The management sector was not far behind at \$162,508. Overall,

wages showed solid growth at 2.5 percent, with eight sectors showing more than 4 percent growth, although management and manufacturing showed small declines.

At the other end of the spectrum, accommodation and food services had the lowest, at \$20,597. This increase was greater than the state average, though it is heavily influenced by part-time jobs. Following that sector were arts, entertainment and recreation at \$27,968, and agriculture, forestry, fishing and hunting at \$32,599 in annual average wages.

2015 was not a great year for wages in the goods producing domain; the service-providing domain fared much better. Goodsproducing wages showed anemic gains at \$75,003, a 0.3 percent increase over 2014, and a 14.5 percent premium over the statewide annual average. Serviceproviding wages increased strongly to \$64,030, an increase of 2.9 percent on an annual basis.

General Drift Indicators are composite measures of the four-quarter change in three coincident (Connecticut Manufacturing Production Index, nonfarm employment, and real personal income) and three leading (housing permits, manufacturing average weekly hours, and initial unemployment claims) economic variables, and are indexed so 1996 = 100.

The Farmington Bank Business Barometer is a measure of overall economic growth in the state of Connecticut that is derived from non-manufacturing employment, real disposable personal income, and manufacturing production.

The Philadelphia Fed's Coincident Index summarizes current economic condition by using four coincident variables: nonfarm payroll employment, average hours worked in manufacturing, the unemployment rate, and wage and salary disbursements deflated by the consumer price index (U.S. city average).
