# Connecticut's Work-Related Fatalities, 1992-2014

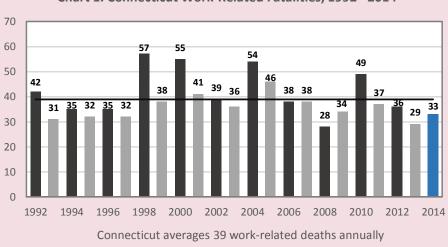

By Erin C. Wilkins, Associate Research Analyst, DOL

hroughout our history, the American worker has labored not only to erect buildings and cities, but also to raise the standards of our Nation's workplaces. Through protests and picket lines, by organizing and raising their voices together, workers have won small and large victories that have pushed our country closer to ensuring safer and healthier jobs for all.

Across the United States, as dedicated Americans clock in at factories, walk onto construction sites, put on their hospital uniforms, and report to do the daily work that drives our Nation's progress, they give meaning to the simple yet profound belief that if you work hard and take responsibility, you can get ahead. However, each year millions of people have their shifts cut short by work-related injuries and illnesses, and on average, 12 Americans lose their lives on the job every day." -President Barack Obama

In 2014, America lost 4,679 people to work-related deaths. Thirty-three of those deaths were in Connecticut. Connecticut's "low" number is primarily due to low employment in high-risk industries. However, it cannot be stressed enough that what is statistically unremarkable has a devastating impact on loved ones. One work-related death is one too many (Chart 1).

Connecticut averages 39 workrelated fatalities annually with a

## THE CONNECTICUT

# Economic Digest

**The Connecticut Economic Digest** is published monthly by the Connecticut Department of Labor, Office of Research, and the Connecticut Department of Economic and Community Development. Its purpose is to regularly provide users with a comprehensive source for the most current, up-to-date data available on the workforce and economy of the state, within perspectives of the region and nation.

The annual subscription is \$50. Send subscription requests to: *The Connecticut Economic Digest*, Connecticut Department of Labor, Office of Research, 200 Folly Brook Boulevard, Wethersfield, CT 06109-1114. Make checks payable to the Connecticut Department of Labor. Back issues are \$4 per copy. The Digest can be accessed free of charge from the DOL Web site. Articles from *The Connecticut Economic Digest* may be reprinted if the source is credited. Please send copies of the reprinted material to the Managing Editor. The views expressed by the authors are theirs alone and may not reflect those of the DOL or DECD.

Managing Editor: Jungmin Charles Joo Associate Editor: Sarah C. Pilipaitis

We would like to acknowledge the contributions of many DOL Research and DECD staff and Rob Damroth to the publication of the Digest.

<sup>1</sup> Data for 2014 are prelimina	rv.

<sup>1</sup> Data for 2014 are preliminary.

<sup>2</sup> A state of incident could not be

determined for five fatalities.

high of 57 in 1998. Nine states recorded numbers lower than Connecticut, with the lowest number of 8 in Vermont. Nationally, four states accounted for 27 percent of deaths: Texas with 524, California 334, Florida 221, and New York with 203 (Table 1).

## **State Rates**

The national rate of fatal work injuries per 100,000 full time employees was 3.3 for both 2013 and 2014. State rates for 2014 will not be available until spring 2016. In 2013, Connecticut's rate was 1.8 per 100,000 full-time equivalent workers.

Nationally, the mining industry had a rate of 12.3 for 2013. North Dakota had a rate of 84.7 in mining with an overall rate of 14.9. The 2013 national rate for the agriculture sector was 22.2; Alaska's agricultural rate was 147.0 and West Virginia's was 130.7.

## **By Industry**

Connecticut's construction sector and the transportation and warehousing sector each had 7 deaths for a combined 42 percent of 2014 deaths (Table 2). There were 3 deaths in the government sector; in the past four years this sector accounted for 16 percent of deaths. Notable industry data for the United States in 2014 include:

- o The largest number of deaths (874) was seen in the construction industry, for a rate of 9.5.
- o The second largest number of deaths (735) was in the transportation and warehousing sector with a rate of 13.5.

O THE CONNECTICUT ECONOMIC DIGEST

o The highest rate of 24.9

Government	3	22				

deaths per 100,000 full-time workers was in the agriculture, forestry, fishing and hunting sector (568 deaths).

- o The second highest rate of 14.1 was seen in the mining, quarrying, and oil and gas extraction sector (181 deaths).
- In construction, falls, slips and trips accounted for the most deaths – 39 percent. For all other sectors listed above, transportation incidents were the primary event.

## **By Occupation**

Construction and extraction occupations accounted for 27 percent of Connecticut's 2014 deaths, followed by transportation and material moving occupations with 24 percent. Over the past four years, 47 percent of construction occupation deaths were the result of falls, slips, and trips. For transportation and material moving occupations, 62 percent were the result of transportation events (Table 3). Notable national data by occupational group:

- o The transportation and material moving occupational group had the highest number of deaths at 1,289, accounting for 28 percent of deaths.
- o The construction and extraction group had 885 deaths, accounting for 19

percent of national deaths.

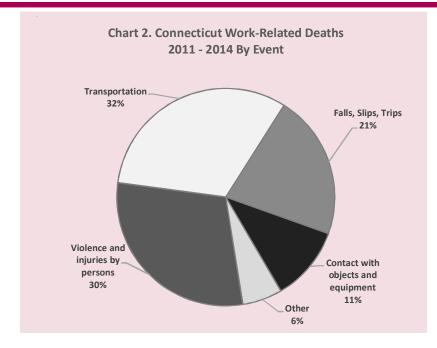

- Logging workers, with a rate of 109.5 deaths per 100,000 full time workers, had the highest rate of any occupational group (77 deaths).
- o Fishers and related fishing workers had the second highest rate of 80.8 (22 deaths).

## By Event

Year after year, transportation incidents claim the most lives in the United States. Homicides and falls consistently follow, trading second and third place. While Connecticut's annual figures do not always follow this pattern, analysis of more than one year does.

From 2011 to 2014, Connecticut had 135 workrelated deaths. Thirty-two percent were transportation incidents. Twenty were roadway incidents, fourteen were pedestrians struck by a vehicle, and seven nonroadway incidents. Non-roadway incidents include accidents in parking lots and workers struck by forklifts in motion (Chart 2).

Table 3. CT Fatal Occupational Injuries by Occupation							
Occupational Group	20	14					
	Number	Percent					
TOTAL <sup>2</sup>	33	100%					
Management	4	12%					
Protective Services	1	3%					
Food Preparation and Serving Related	2	6%					
Building and Grounds, Cleaning and Maintenance	1	3%					
Sales and Related	3	9%					
Construction and Extraction	9	27%					
Installation, Maintenance, and Repair	1	3%					
Production	3	9%					
Transportation and Material Moving	8	24%					

Over the past four years, thirty percent (40 deaths) were attributed to acts of violence, half of which were homicides. Included in the violence category are accidental "friendly fire" incidents. Also included are animal and insect-related deaths such as attacks by livestock and allergic reactions to insect stings. Connecticut sees few deaths in this category; no data were publishable for the past four vears. In 2014, there were 39 such deaths in the nation. Half of them occurred on farms.

Falls, slips, and trips claimed the lives of eight Connecticut workers in 2014. Over the past four years, this category claimed 29 lives (21 percent). Seventy six percent were falls to a lower level (other categories include falls on the same level and jumps). While Connecticut data is not publishable by height of fall, national data is available. Of the cases where the height of the fall was known, two out of three were twenty feet or less. Eleven percent were less than six feet.

#### By Gender

The workforce is almost evenly

divided between men and women. However, men have a disproportionate number of deaths - 91 percent of Connecticut's 2014 deaths. National data reveals a notable disparity in two events: homicides and contact with objects and equipment. Homicides accounted for 19 percent of women's deaths but eight percent of men's. Contact with objects and equipment accounted for seven percent of women's deaths but 16 percent of men's.

# Identifying Work-Related Deaths

The media is often the first notice of a work-related death. Other resources include death certificates, coast guard reports, the NHTSA (National Highway and Traffic Safety Administration), and OSHA (Occupational Safety and Health Administration). The CFOI (Census of Fatal Occupational Injuries) program requires a minimum of two sources to verify a work-related death.

While every attempt is made to capture every work-related

death, some are not documented in the census. Especially hard to capture are deaths that occur months or years after the incident. Some resources, such as police reports, are not released until the case is closed. This can be months after the incident. The BLS (Bureau of Labor Statistics) wants to provide both timely data and accurate data. In order to serve both goals, the CFOI program has two press release dates. Preliminary 2014 data was first published in September 2015 and final data will be published in the spring of 2016. On average, 173 cases are added during this time period.

Note: the Bureau of Labor Statistics holds all information on companies and the deceased in strict confidence. Information is never shared for compliance measures.

OSHA requires all employers to report workplace fatalities within eight hours. Included are small establishments and industries that are normally exempt from OSHA jurisdiction. Natural deaths, such as heart attacks, must also be reported. However, many employers are unaware of this requirement. Additionally, OSHA does not require employers to report all fatalities. Employers are not required to report:

- o Street and transportation deaths unless they occur in a construction work zone
- o Deaths on commercial or public transportation systems (airplane, subway, bus, train, etc.)
- o Deaths occurring more than 30 days after the incident

OSHA does not investigate every work-related death. Homicides and most transportation incidents fall outside OSHA's jurisdiction. However, OSHA is beginning to investigate these deaths and develop training programs. Homicides may be prevented with changes in security cameras and enforcing safety rules. Transportation deaths can be prevented with training programs on distracted driving, sleep deprivation, and developing safe driving techniques.

#### History of the Program

When President Nixon signed the Occupational Safety and Health Act of 1970 (OSHA) into law, a census of work place fatalities did not exist. It was estimated that approximately 14,000 workers were killed on the job annually. While OSHA immediately began investigating workplace deaths, the U.S. Department of Labor did not have a comprehensive statistical program dedicated to documenting workplace deaths. In 1992, the Bureau of Labor Statistics' Census of Fatal Occupational Injuries (CFOI) was established to track all workrelated deaths and collect the much needed data. That first year, 6,217 deaths were documented nationally, 42 of which were in Connecticut. Since then, national numbers have dropped by 25 percent to a preliminary count of 4,679 deaths in 2014.

Since 1992, the CFOI program has seen several changes. Prior to 2006, rates were calculated per 100,000 workers. Now the rates take into account the number of hours spent in the workplace, resulting in rates per 100,000 full-time equivalent workers. Changes in occupation and industry coding occurred as the Standard **Occupational Classification** replaced the Dictionary of Occupational Titles and the North American Industry Classification replaced the

Standard Industry Classification. The coding structure for nature, part, event, and sources was changed in 2011. Recently, the program began tracking contractor status, the use of drugs or alcohol, seat belt use, and more. The program continues to develop to meet needs of researchers. Hopefully the data will continue to be used to create engineering solutions, regulations, and education programs to minimize work place deaths.

"Every worker has a right to a safe and healthy workplace and a right to speak up when they believe something is unsafe. Every employer has a responsibility to ensure the safety of their workers, and forward-looking businesses know that compromising the safety of workers to improve the bottom line is a false choice." -Secretary of Labor Thomas E. Perez

**General Drift Indicators** are composite measures of the four-quarter change in three coincident (Connecticut Manufacturing Production Index, nonfarm employment, and real personal income) and three leading (housing permits, manufacturing average weekly hours, and initial unemployment claims) economic variables, and are indexed so 1996 = 100.

The Farmington Bank Business Barometer is a measure of overall economic growth in the state of Connecticut that is derived from non-manufacturing employment, real disposable personal income, and manufacturing production.

The **Philadelphia Fed's Coincident Index** summarizes current economic condition by using four coincident variables: nonfarm payroll employment, average hours worked in manufacturing, the unemployment rate, and wage and salary disbursements deflated by the consumer price index (U.S. city average).

## CT Online Labor Demand Rose 1,700 in October

The Conference Board's Help Wanted OnLine (HWOL) data reported that there were 78,400 advertisements for Connecticutbased jobs in October 2015, a 2.2 percent increase over the month and a 10.6 percent increase over the year. There were 4.13 advertised vacancies for every 100 persons in Connecticut's labor force, while nationally it was 3.48 percent. Among the New England states, Massachusetts had the highest labor demand rate (4.79), while Maine had the lowest rate (3.47) in October.

# **HELP WANTED ONLINE**

	Oct	Oct	Sep			
(Seasonally adjusted)	2015	2014	2015			
CT Vacancies (000s)	78.4	70.9	76.7			
Hartford Vac. (000s)	31.5	27.3	29.9			
Labor Demand Rate *						
Connecticut	4.13	3.75	4.04			
United States	3.48	3.31	3.37			
Maine	3.47	4.31	3.55			
Massachusetts	4.79	4.37	4.76			
New Hampshire	3.57	4.04	3.43			
Rhode Island	3.74	3.70	3.70			
Vermont	3.59	3.81	3.67			

\* A percent of advertised vacancies per 100 persons in labor force Source: The Conference Board

The Conference Board Help Wanted OnLine® Data Series (HWOL) measures the number of new, first-time online jobs and jobs reposted from the previous month for over 16,000 Internet job boards, corporate boards and smaller job sites that serve niche markets and smaller geographic areas. Background information and technical notes and discussion of revisions to the series are available at: www.conference-board.org/data/helpwantedonline.cfm.

NOTE: More industry detail data is available for the State and its nine labor market areas at: http:// www.ctdol.state.ct.us/lmi/202/covered.htm. The data published there differ from the data in the preceding tables in that they are developed from a near-universe count of Connecticut employment covered by the unemployment insurance (UI) program, while the data here is sample-based. The data drawn from the UI program does not contain estimates of employment not covered by unemployment insurance, and is lagged several months behind the current employment estimates presented here.

## **BUSINESS AND EMPLOYMENT CHANGES ANNOUNCED IN THE NEWS MEDIA**

- In October 2015, MC Credit Partners announced it will be moving to the state from New York, adding 26 jobs over the next four years.
- In October 2015, Day Kimball Hospital of Putnam announced it will have to cut 23 jobs this year due to state budget funding reductions. RBS Securities of Stamford will be reducing its workforce by another 64 workers in December.

Business & Employment Changes Announced in the News Media lists start-ups, expansions, staff reductions, and layoffs reported by the media, both current and future. The report provides company name, the number of workers involved, date of the action, the principal product or service of the company, a brief synopsis of the action, and the source and date of the media article. This publication is available in both HTML and PDF formats at the Connecticut Department of Labor Web site, <a href="http://www.ctdol.state.ct.us/lmi/busemp.htm">http://www.ctdol.state.ct.us/lmi/busemp.htm</a>.

#### LABOR FORCE CONCEPTS

The **civilian labor force** comprises all state residents age 16 years and older classified as employed or unemployed in accordance with criteria described below. Excluded are members of the military and persons in institutions (correctional and mental health, for example).

The **employed** are all persons who did any work as paid employees or in their own business during the survey week, or who have worked 15 hours or more as unpaid workers in an enterprise operated by a family member. Persons temporarily absent from a job because of illness, bad weather, strike or for personal reasons are also counted as employed whether they were paid by their employer or were seeking other jobs.

The **unemployed** are all persons who did not work, but were available for work during the survey week (except for temporary illness) and made specific efforts to find a job in the prior four weeks. Persons waiting to be recalled to a job from which they had been laid off need not be looking for work to be classified as unemployed.

#### LABOR FORCE CONCEPTS (Continued)

5.3

CONNECTICUT

UNITED STATES

The unemployment rate represents the number unemployed as a percent of the civilian labor force.

846

15,006

15,852

With the exception of those persons temporarily absent from a job or waiting to be recalled to one, persons with no job and who are not actively looking for one are counted as "not in the labor force".

Over the course of a year, the size of the labor force and the levels of employment undergo fluctuations due to such seasonal events as changes in weather, reduced or expanded production, harvests, major holidays and the opening and closing of schools. Because these seasonal events follow a regular pattern each year, their influence on statistical trends can be eliminated by adjusting the monthly statistics. **Seasonal Adjustment** makes it easier to observe cyclical and other nonseasonal developments.

For further information on the housing permit data, contact Kolie Sun of DECD at (860) 270-8167.

#### **BUSINESS STARTS AND TERMINATIONS**

**BUSINESS STARTS AND TERMINATIONS** Registrations and terminations of business entities as recorded with the Secretary of the State and the Connecticut Department of Labor (DOL) are an indication of new business formation and activity. DOL business starts include new employers which have become liable for unemployment insurance taxes during the quarter, as well as new establish-ments opened by existing employers. DOL business terminations are those accounts discontinued due to inactivity (no employees) or business closure, and accounts for individual business establishments that are closed by still active employers. The Secretary of the State registrations include limited liability companies, limited liability partnerships, and foreign-owned (out-of-state) and domestic-owned (in-state) corporations.

#### CONSUMER PRICE INDEX

The Consumer Price Index (CPI), computed and published by the U.S. Bureau of Labor Statistics, is a measure of the average change in prices over time in a fixed market basket of goods and services. It is based on prices of food, clothing, shelter, fuels, transportation fares, charges for doctors' and dentists' services, drugs and other goods and services that people buy for their day-to-day living. The Northeast region is comprised of the New England states, New York, New Jersey and Pennsylvania.

#### **EMPLOYMENT COST INDEX**

The Employment Cost Index (ECI) covers both wages and salaries and employer costs for employee benefits for all occupations and establishments in both the private nonfarm sector and state and local government. The ECI measures employers' labor costs free from the influences of employment shifts among industries and occupations. The base period for all data is December 2005 when the ECI is 100.

#### GAMING DATA

Indian Gaming Payments are amounts received by the State as a result of the slot compact with the two Federally recognized tribes in Connecticut, which calls for 25 percent of net slot receipts to be remitted to the State. Indian Gaming Slots are the total net revenues from slot machines only received by the two Federally recognized Indian tribes.

#### HOURS AND EARNINGS ESTIMATES

Production worker earnings and hours estimates include full- and part-time employees working within manufacturing industries. Hours worked and earnings data are computed based on payroll figures for the week including the 12th of the month. Average hourly earnings are affected by such factors as premium pay for overtime and shift differential as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of weekly hours worked and hourly earnings. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

#### **INITIAL CLAIMS**

Average weekly initial claims are calculated by dividing the total number of new claims for unemployment insurance received in the month by the number of weeks in the month. A minor change in methodology took effect with data published in the March 1997 issue of the DIGEST. Data have been revised back to January 1980.

#### INSURED UNEMPLOYMENT RATE

Primarily a measure of unemployment insurance program activity, the insured unemployment rate is the 13-week average of the number of people claiming unemployment benefits divided by the number of workers covered by the unemployment insurance system.

#### LABOR FORCE ESTIMATES

Labor force estimates are a measure of the work status of people who live in Connecticut. Prepared under the direction of the U.S. Bureau of Labor Statistics, the statewide estimates are the product of a signal-plus noise model, which uses results from the Current Population Survey (CPS), a monthly survey of Connecticut households, counts of claimants for unemployment benefits, and establishment employment estimates. The 2015 LAUS Redesign includes improved timeseries models for the census divisions, states, select substate areas, and the balances of those states; an improved real-time benchmarking procedure to the national Current Population Survey (CPS) estimates; an improved smoothed seasonal adjustment procedure; and improved treatment of outliers. Non-modeled area estimation improvements include: updated Dynamic Residency Ratios (DRR); more accurate estimates for all-other employment; more accurate estimation of non-covered agricultural unemployment. Handbook estimation of agricultural employment; and improved estimation of non-covered agricultural unemployment. Handbook estimation is now done at the city/town level instead of at the Labor Market Area (LMA) level in Connecticut, which better reflects local conditions. The Redesign also introduces estimation inputs from the American Community Survey (ACS) to replace inputs that were previously obtained from the decennial census long-form survey. Labor force data, reflecting persons employed by place of residence, are not directly comparable to the place-of-work industry employment particulated in labor force activity of the discussion of the decential comparable to the place-of-work industry employment series. In the labor force estimates, workers involved in labor disputes are counted as employed. The labor force data also includes agricultural workers, unpaid family workers, domestics and the self-employed. Because of these conceptual differences, total labor force employment is almost always different from nonfarm wage and salary employment

#### LABOR MARKET AREAS

**LABOR MARKET AREAS** All Labor Market Areas (LMAs) in Connecticut except three are federally-designated areas for developing labor statistics. For the sake of simplicity, the federal Bridgeport-Stamford-Norwalk NECTA is referred to in Connecticut DOL publications as the Bridgeport-Stamford LMA, and the Hartford-West Hartford-East Hartford NECTA is the Hartford LMA. The northwest part of the state is now called Torrington-Northwest LMA. Five towns which are part of the Springfield, MA area are published as the Enfield LMA. The towns of Eastford and Hampton and other towns in the northeast are now called Danielson-Northeast LMA. Industry employment and labor force data estimates contained in Connecticut Department of Labor publications are prepared following the same statistical procedures developed by the U.S. Department of Labor, Bureau of Labor Statistics, whether for federally designated or state-determined areas.

#### NONFARM EMPLOYMENT ESTIMATES

Nonfarm employment estimates are derived from a survey of businesses to measure *jobs* by industry. The estimates include all full- and part-time wage and salary employees who worked during or received pay for the pay period which includes the 12th of the month. Excluded from these estimates are proprietors, self-employed workers, private household employees and unpaid family workers. In some cases, due to space constraints, all industry estimates are not shown. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

#### **UI COVERED WAGES**

UI covered wages is the total amount paid to those employees who are covered under the Connecticut's Unemployment Insurance (UI) law for services performed during the quarter. The fluctuations in the 1992-93 period reflect the effect of the changes in the tax law and the massive restructuring in the state's economy.
