Exports Grew for the Third Year

By Laura Jaworski, Office of Business Development, DECD

Connecticut exports grew for the third consecutive year in 2023. Commodity exports increased 3.13% over 2022, totaling over \$15.82 billion.¹

More Connecticut companies are exporting as well. The most recent data indicates that 4,761 companies exported from Connecticut in 2021, up from 4,606 companies in 2020.² 89% of these companies were small and medium-sized enterprises (SMEs) with fewer than 500 employees.³ According to the most recent data, approximately 50,705 U.S. jobs were supported by Connecticut exports.⁴

Connecticut Partner Countries

In 2023, the state's top ten commodity export destinations were Germany, Canada, the Netherlands, the United Kingdom, Mexico, France, China, Singapore, South Korea, and Japan. Among the top ten destinations, except for the U.K., Mexico, and France, all experienced export growth. Exports to the U.K. dropped most significantly, down 19.59% over 2022.⁵

In 2023, there were decreases in many of the top ten Connecticut export commodity sectors to the United Kingdom, the largest being in the aircraft, spacecraft, and parts sector. A potential reason for this is continued regulatory challenges of Brexit and customs barriers. Higher inflation and rising energy prices in the United

Kingdom have also shifted consumer goods spending.

Among its top ten export destinations, Connecticut commodities experienced the largest percentage increase, 24.79%, to Singapore. The increase was fueled in large part due to an increase in exports of parts and accessories of arms and parts and accessories of pistols or revolvers. This defense gear-up is perhaps due to the ongoing tensions in the Asia-Pacific region.⁶

Connecticut Export Composition

Last year at the two-digit Harmonized System (HS) commodity code level, Connecticut's top five export commodities were (1) aircraft, spacecraft and parts thereof; (2) industrial machinery, including computers; (3) electric machinery, sound equipment, TV equipment, parts; (4) optic, photo, medical or surgical instruments; and (5) special classification provisions, which typically consists of exports of repaired imports. Except for optic, photo, medical or surgical instruments, each of the top five export commodity sectors experienced percentage increases, ranging from 0.89% to 44.07%. The state's aerospace sector continued to register increases, growing 3.91% in 2022 and 0.89% in 2023. However, that particular commodity sector has not returned to pre-pandemic levels.⁷

The Connecticut Economic Digest is published monthly by the Connecticut Department of Labor, Office of Research, and the Connecticut Department of Economic and Community Development. Its purpose is to regularly provide users with a comprehensive source for the most current, up-to-date data available on the workforce and economy of the state, within perspectives of the region and nation.

The annual subscription is \$50. Send subscription requests to: *The Connecticut Economic Digest*, Connecticut Department of Labor, Office of Research, 200 Folly Brook Boulevard, Wethersfield, CT 06109-1114. Make checks payable to the Connecticut Department of Labor. Back issues are \$4 per copy. The Digest can be accessed free of charge from the DOL Web site. Articles from *The Connecticut Economic Digest* may be reprinted if the source is credited. Please send copies of the reprinted material to the Managing Editor. The views expressed by the authors are theirs alone and may not reflect those of the DOL or DECD.

U.S. Exports

Between 2022 and 2023, U.S. export commodities decreased slightly (2.23%) and totaled over \$2.01 trillion. For national context, in 2023, the top five U.S. export commodities were (1) mineral fuel, oil, bitumin substances, mineral wax; (2) industrial machinery, including computers; (3) electric machinery, sound equipment, TV equipment, parts; (4) vehicles, except railway or tramway; and (5) aircraft, spacecraft, and parts. Among the top five U.S. exports, the commodity making the greatest gains was aircraft, spacecraft, and parts thereof, as it increased 20.93% over 2022, including engines, parts of planes and helicopters, and unmanned aircraft.⁸

The annual U.S. trade deficit fell 18.7% to the lowest level in three years. It narrowed in 2023 as the value of imported goods declined, consumer goods demand decreased, the dollar was weaker, and as the U.S. continued to grow to a major oil producer and exporter.⁹

Due to geographic proximity, it should come as no surprise that Canada and Mexico remained the top two destinations for U.S. exports in 2023. China, the Netherlands, and Germany rounded out the top five destinations for U.S. commodity exports. Within this top five group, U.S. exports increased to the Netherlands and Germany between 2022 and 2003, led by commodities such as crude oil, medical instruments, organic chemicals, and vehicles and parts.¹⁰

It will be interesting to monitor future U.S.-China trade and economic relations. For example, in the semiconductor industry, via the CHIPS and Science Act, the U.S. has moved to strengthen domestic industrial policy and is directing U.S. dollars

towards scientific research and U.S. production of high-tech goods. The U.S. has also introduced new trade restrictions on China, including export controls on computer chips and restrictions on U.S. investment in Chinese high-tech industries.

In 2023, Connecticut rose one place to rank 31st in the U.S. in state-by-state exports. Texas, California, Louisiana, New York, and Illinois were the top five export states in 2023, ranked in terms of export commodity dollars, marked by increases in sectors such as aircraft engines and parts.

New England Exports

In 2023, the New England region's top five export commodities were (1) industrial machinery, including computers; (2) pharmaceutical products, (3) optic, photo, medical or surgical instruments, (4) electric machinery, sound equipment, TV equipment, parts; and (5) aircraft, spacecraft, and parts thereof. For the region, pharmaceutical products, including vaccines, immunological products, and cell therapy products experienced large export increases.¹¹

In New England in 2023, only Massachusetts' exports value ranked higher than Connecticut's. As a regional trading block, New England's commodity exports totaled more than \$66.64 billion in 2023, a 3.88% increase from 2022. The top five export destinations for New England commodities were Canada, Germany, Belgium, China, and Mexico.¹²

Factors Impacting Trade

Although there are encouraging signs of sustained growth, state commodity exports lag pre-2020 levels. Many factors influenced the 2023 global trade framework including

geopolitics and reshoring to politically aligned partners. Inflation and high interest rates continued to impact consumer spending. Other issues, such as the U.S.-China economic relationship, the ongoing war in Ukraine, and threats to the global trade system, such as supply chain vessel disruptions and diversions in critical trade and shipping routes in the Red Sea, also impacted transportation, logistics, and trade.

State Trade Expansion Promotion (STEP) Export Grant

There are many federal and state export support resources to

help Connecticut companies take advantage of trade opportunities and navigate global issues. One example is the U.S. Small Business Administration's State Trade Expansion Promotion (STEP) grant award, which DECD administers.

The program's goals are to increase the number of small business exporters and increase export sales. In conjunction with organizations such as the local U.S. Department of Commerce Export Assistance Center (USEAC), the Small Business Development Center (SBDC) and others, DECD directs STEP funds towards small businesses for export development and training

opportunities, company participation in foreign and domestic trade shows and trade missions, website translation, and other export initiatives and events. For more information about STEP grant activities, eligibility standards, program guidelines, and application procedures, please contact Laura Jaworski at laura.jaworski@ct.gov or visit www.stepgrant.smapply.io. ■

Connecticut's Population Gains

By Patrick J. Flaherty, Director of Research and Information, DOL

The latest population estimates from the U.S. Census Bureau show that Connecticut's population increased by 8,470 in 2023 with births outnumbering deaths by 2,115 and net migration from other states and countries totaling 6,248. While it will be some months before a breakdown by state and age will be available for 2023, the available data through 2022 show encouraging signs for Connecticut.

The American Community Survey (ACS) is conducted by the U.S. Census and surveys approximately 1% of the U.S. population each year. Both a one-year and a five-year sample are published. The five-year sample includes responses for five consecutive years, so the estimates are based on a survey of approximately 5% of the population. In general, a larger sample will make detailed estimates more reliable. The latest five-year sample (through 2022) shows that more people moved to Connecticut from other

states and countries than left Connecticut in every age group except those aged 55 to 64. For that group, the net loss was small, averaging just 220 per year. The largest net increases were in those aged 25 to 34 and 35 to 44, with over 8,000 more people aged 25 to 34 moving to Connecticut each year (on average) than leaving and 4,500 more in the 35 to 44 age group. Excluding international migration, approximately 2,000 more people in each of these age groups moved to Connecticut from other states each year than moved to other states from Connecticut. Connecticut also had a net gain of people aged 45 to 54, with more moving to Connecticut from other states than leaving Connecticut for other states. These age groups are considered "prime working age". The net losses to other states were those aged 15 to 24, 55 to 64, and age 65 and over.

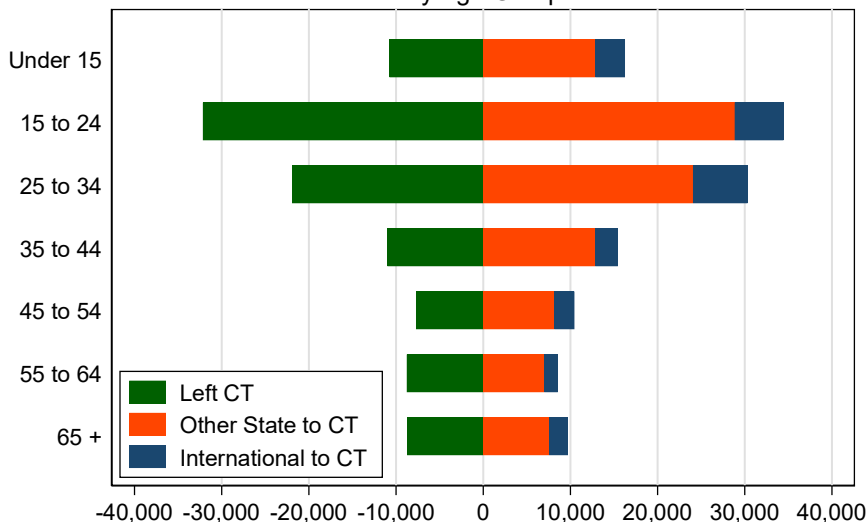

As the chart shows, those in their late teens and early

twenties move across state lines more than other groups. Tens of thousands of people in this age group move to Connecticut each year from other states and slightly more move from Connecticut to other states. When international migration is considered, Connecticut gains in this age group. Even in the age groups 55 and over, migration goes both ways. While Connecticut loses slightly more to other states in these age groups than we gain from other states (for reasons such as the weather) there are still thousands of people moving to Connecticut in these age groups each year.

The ACS migration data show that India was the country with the most immigrants to Connecticut according to the 2022 five-year sample followed by Brazil, China, Ecuador, and the United Kingdom. India and China were the top two in the 2012 five-year sample (ten years prior) followed by Jamaica, Canada, and Japan.

Recently released population figures for 2023 show that Connecticut ranked 29th in the country in population increase from April 1, 2020 to July 1, 2023. As would be expected, some much larger states had larger increases (Texas and Florida had the largest population increases). Connecticut's increase occurred even as the Northeast region lost population over this period. While 2023 details are not yet available, details through 2022 demonstrate that Connecticut is attracting residents of all age groups from other states and other countries. ■

General Drift Indicators are composite measures of the four-quarter change in three coincident (Connecticut Manufacturing Production Index, nonfarm employment, and real personal income) and three leading (housing permits, manufacturing average weekly hours, and initial unemployment claims) economic variables, and are indexed so 2007 = 100.

The **Philadelphia Fed's Coincident Index** summarizes current economic condition by using four coincident variables: nonfarm payroll employment, average hours worked in manufacturing, the unemployment rate, and wage and salary disbursements deflated by the consumer price index (U.S. city average).

Source: CT DOL Research Office Analysis of HWOL Data Series

The Conference Board Help Wanted OnLine Data Series (HWOL) measures the number of new, first-time online jobs and jobs reposted from the previous month for over 16,000 Internet job boards, corporate boards and smaller job sites that serve niche markets and smaller geographic areas. The data can be used as a real-time measure of labor demand. For more information go to <https://www1.ctdol.state.ct.us/lmi/hwol.asp>.

NOTE: More industry detail data is available for the State and its nine labor market areas at: <http://www.ctdol.state.ct.us/lmi/202/covered.htm>. The data published there differ from the data in the preceding tables in that they are developed from a near-universe count of Connecticut employment covered by the unemployment insurance (UI) program, while the data here is sample-based. The data drawn from the UI program does not contain estimates of employment not covered by unemployment insurance, and is lagged several months behind the current employment estimates presented here.

All Labor Market Areas (LMAs) in Connecticut except three are federally-designated areas for developing labor statistics. For the sake of simplicity, the federal Bridgeport-Stamford-Norwalk NECTA is referred to in Connecticut DOL publications as the Bridgeport-Stamford LMA, and the Hartford-West Hartford-East Hartford NECTA is the Hartford LMA. The northwest part of the state is now called Torrington-Northwest LMA. Five towns which are part of the Springfield, MA area are published as the Enfield LMA. The towns of Eastford and Hampton and other towns in the northeast are now called Danielson-Northeast LMA.

LABOR FORCE CONCEPTS

The **civilian labor force** comprises all state residents age 16 years and older classified as employed or unemployed in accordance with criteria described below. Excluded are members of the military and persons in institutions (correctional and mental health, for example).

The **employed** are all persons who did any work as paid employees or in their own business during the survey week, or who have worked 15 hours or more as unpaid workers in an enterprise operated by a family member. Persons temporarily absent from a job because of illness, bad weather, strike or for personal reasons are also counted as employed whether they were paid by their employer or were seeking other jobs. The **unemployed** are all persons who did not work, but were available for work during the survey week (except for temporary illness) and made specific efforts to find a job in the prior four weeks. Persons waiting to be recalled to a job from which they had been laid off need not be looking for work to be classified as unemployed.

LABOR FORCE CONCEPTS (Continued)

The **unemployment rate** represents the number unemployed as a percent of the civilian labor force.

With the exception of those persons temporarily absent from a job or waiting to be recalled to one, persons with no job and who are not actively looking for one are counted as "not in the labor force".

Over the course of a year, the size of the labor force and the levels of employment undergo fluctuations due to such seasonal events as changes in weather, reduced or expanded production, harvests, major holidays and the opening and closing of schools. Because these seasonal events follow a regular pattern each year, their influence on statistical trends can be eliminated by adjusting the monthly statistics. **Seasonal Adjustment** makes it easier to observe cyclical and other nonseasonal developments.

BUSINESS STARTS AND TERMINATIONS

Registrations and terminations of business entities as recorded with the U.S. Census Bureau and the Connecticut Department of Labor (DOL) are an indication of new business formation and activity. DOL business starts include new employers which have become liable for unemployment insurance taxes during the quarter, as well as new establishments opened by existing employers. DOL business terminations are those accounts discontinued due to inactivity (no employees) or business closure, and accounts for individual business establishments that are closed by still active employers. The Census's business formations include limited liability companies, limited liability partnerships, and foreign-owned (out-of-state) and domestic-owned (in-state) corporations.

CONSUMER PRICE INDEX

The Consumer Price Index (CPI), computed and published by the U.S. Bureau of Labor Statistics, is a measure of the average change in prices over time in a fixed market basket of goods and services. It is based on prices of food, clothing, shelter, fuels, transportation fares, charges for doctors' and dentists' services, drugs and other goods and services that people buy for their day-to-day living. The Northeast region is comprised of the New England states, New York, New Jersey and Pennsylvania.

EMPLOYMENT COST INDEX

The Employment Cost Index (ECI) covers both wages and salaries and employer costs for employee benefits for all occupations and establishments in both the private nonfarm sector and state and local government. The ECI measures employers' labor costs free from the influences of employment shifts among industries and occupations. The base period for all data is December 2005 when the ECI is 100.

GAMING DATA

Indian Gaming Payments are amounts received by the State as a result of the slot compact with the two Federally recognized tribes in Connecticut, which calls for 25 percent of net slot receipts to be remitted to the State. Indian Gaming Slots are the total net revenues from slot machines only received by the two Federally recognized Indian tribes.

HOURS AND EARNINGS ESTIMATES

Production worker earnings and hours estimates include full- and part-time employees working within manufacturing industries. Hours worked and earnings data are computed based on payroll figures for the week including the 12th of the month. Average hourly earnings are affected by such factors as premium pay for overtime and shift differential as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of weekly hours worked and hourly earnings. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

INITIAL CLAIMS

Average weekly initial claims are calculated by dividing the total number of new claims for unemployment insurance received in the month by the number of weeks in the month. A minor change in methodology took effect with data published in the March 1997 issue of the DIGEST. Data have been revised back to January 1980.

INSURED UNEMPLOYMENT RATE

Primarily a measure of unemployment insurance program activity, the insured unemployment rate is the 13-week average of the number of people claiming unemployment benefits divided by the number of workers covered by the unemployment insurance system.

LABOR FORCE ESTIMATES

Labor force estimates are a measure of the work status of people who live in Connecticut. Prepared under the direction of the U.S. Bureau of Labor Statistics, the statewide estimates are the product of a signal-plus noise model, which uses results from the Current Population Survey (CPS), a monthly survey of Connecticut households, counts of claimants for unemployment benefits, and establishment employment estimates. The 2015 LAUS Redesign includes improved time-series models for the census divisions, states, select substate areas, and the balances of those states; an improved real-time benchmarking procedure to the national Current Population Survey (CPS) estimates; an improved smoothed seasonal adjustment procedure; and improved treatment of outliers. Non-modeled area estimation improvements include: updated Dynamic Residency Ratios (DRR); more accurate estimates for all-other employment; more accurate estimation of agricultural employment; and improved estimation of non-covered agricultural unemployment. Handbook estimation is now done at the city/town level instead of at the Labor Market Area (LMA) level in Connecticut, which better reflects local conditions. The Redesign also introduces estimation inputs from the American Community Survey (ACS) to replace inputs that were previously obtained from the decennial census long-form survey. Labor force data, reflecting persons employed by place of residence, are not directly comparable to the place-of-work industry employment series. In the labor force estimates, workers involved in labor disputes are counted as employed. The labor force data also includes agricultural workers, unpaid family workers, domestics and the self-employed. Because of these conceptual differences, total labor force employment is almost always different from nonfarm wage and salary employment.

LABOR MARKET AREAS

All Labor Market Areas (LMAs) in Connecticut except three are federally-designated areas for developing labor statistics. For the sake of simplicity, the federal Bridgeport-Stamford-Norwalk NECTA is referred to in Connecticut DOL publications as the Bridgeport-Stamford LMA, and the Hartford-West Hartford-East Hartford NECTA is the Hartford LMA. The northwest part of the state is now called Torrington-Northwest LMA. Five towns which are part of the Springfield, MA area are published as the Enfield LMA. The towns of Eastford and Hampton and other towns in the northeast are now called Danielson-Northeast LMA. Industry employment and labor force data estimates contained in Connecticut Department of Labor publications are prepared following the same statistical procedures developed by the U.S. Department of Labor, Bureau of Labor Statistics, whether for federally designated or state-determined areas.

NONFARM EMPLOYMENT ESTIMATES

Nonfarm employment estimates are derived from a survey of businesses to measure *jobs* by industry. The estimates include all full- and part-time wage and salary employees who worked during or received pay for the pay period which includes the 12th of the month. Excluded from these estimates are proprietors, self-employed workers, private household employees and unpaid family workers. In some cases, due to space constraints, all industry estimates are not shown. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

UI COVERED WAGES

UI covered wages is the total amount paid to those employees who are covered under the Connecticut's Unemployment Insurance (UI) law for services performed during the quarter. The fluctuations in the 1992-93 period reflect the effect of the changes in the tax law and the massive restructuring in the state's economy.
