## Covered Employment and Wages: A 2012 Annual Review

By Jonathan Kuchta, CCT, DOL, jonathan.kuchta@ct.gov

he number of workers in CT covered by Unemployment Insurance (UI) increased by 1.0 percent during 2012, according to most recent data published from the Quarterly Census of Employment and Wages (QCEW) program (see table on pages 2 and 3). This increase built upon the 1.0 percent increase from 2011, as opposed to the 1.2 percent decline noted in 2010. Total private industry employment, constituting 85.5 percent of the State's employment total [little changed from 2011's 85.3], increased by 1.2 percent. Government employment decreased by 0.5 percent year-over-year.

Average Annual wages of all Connecticut workers increased by 1.7 percent to \$62,159. Private sector wages increased slightly more at 2.0 percent, to \$63,248 in 2012, while government wages declined 0.5 percent to 55,749.

The number of business establishments increased after consecutive drops in 2010 and 2011, with a new total of 111,933, an increase of 1.1 percent over 2011. Total private establishments increased 1.2 percent, reaching 108,471 in 2012. Government worksites decreased 3.1 percent in the state, from 3,571 in 2011 down to 3,462 in 2012.

### **Industry Sector Employment**

Looking at the sectors with notable gains in 2012 from their 2011 levels, several sectors continued to improve. The health care and social assistance, accommodation and food services; administrative and waste management and transportation and warehousing sectors all showed increases.

Accommodation and food services was the largest gainer, expanding by 4,436 jobs.

Very few sectors declined in 2012, though they were led by government with a loss of 1,188, and manufacturing with a drop of 1,073. The drop in manufacturing wiped out all of the gains in employment that the sector experienced in 2011.

Due to administrative changes, some firms that had been in other NAICS sectors are now represented in the management of companies and enterprises, accounting for nearly 40% of the 6.8% increase in 2012.

The Bureau of Labor Statistics (BLS) aggregates NAICS sectors to form the top level goods-producing and service-providing "domains". Goods-producing sectors include agriculture, forestry, fishing, and hunting; mining; construction; and manufacturing. The remaining sectors are aggregated into the service-providing domain.

## **Connecticut Migration Patterns**

By Matthew Krzyzek, Economist, DOL, matthew.krzyzek@ct.gov

xamining interstate migration patterns provides an interesting view of where new Nutmeggers are coming from and where former Connecticut residents are going.

Table 1 shows the ten largest sources of Connecticut inflow migration. The bordering states of New York and Massachusetts had the largest combined share of total inflow to the state at 39 percent of total inflows. Together with the third largest inflow state of Florida, those three states totaled 45 percent of flows into Connecticut. These three states since 2005 have consistently comprised the top three inflow origins to Connecticut. Overall inflow to the state in 2011 was 73,607 new residents. From 2005 through 2011 inflow peaked in 2006 at 88,518 new residents.

Table 1. CT Migration By State - 2011

Table 1. Of Migia	tion by ota	Table 1. C1 Migration by State - 2011								
States/Territories	CT Inflow	Outflow	Net Flows							
NY	20,015	15,123	4,892							
MA	8,691	9,445	-754

Total	73,607	93,144	-19,537							

Source: U.S. Census Bureau - American Community Survey

The three largest inflow states also have the largest outflow from Connecticut. The top three states had a combined 39 percent share of total outflow from Connecticut.

Net migration is the difference between outflows and inflows to and from a particular state. From 2005 through 2011, Connecticut annual net migration averaged -15,982 residents per year, the smallest negative net of -6,622 occurred in 2005 and the largest occurred in 2006 with -24,235 residents. In 2011 Connecticut had total net migration of -19,537 residents, having negative net migration with 33 of 52 states and territories. The largest were Florida, Virginia, and Alabama with -6,933, -2821, and -2,820, respectively. The largest positive net migration states were New York, New Jersey, and Georgia, with net flows

into Connecticut of 4,892, 1,885, and 1,291, respectively.

Graph 1 shows Connecticut inflow and outflow by Census Region from 2005 through 2011. The Western region in 2005 had a significant outmigration from the state, but in/outmigration has closely matched each other from 2008 onward. The Southern Census region was the only geographic region that has consistently had a pronounced net-outmigration from Connecticut, driven in large part by the high number of Connecticut residents relocating to Florida.

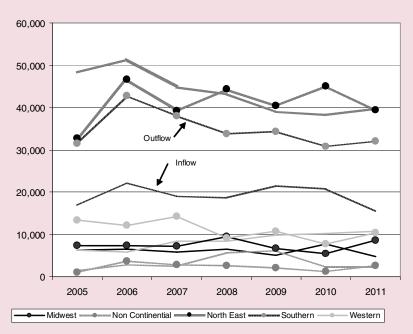

Examining the annual percent share of inflows to Connecticut by state shows where the largest changes in migration have occurred. From 2005 to 2011, Massachusetts, Washington State, and Puerto Rico had the three largest increases in percent share of net migration to Connecticut. Those geographies had respective shares of total inflows to Connecticut of 11.8% (+2.4 pts), 3.1% (+2.3pts), and 2.9% (+1.9pts) in 2011.

The three states with the largest share decreases were New York, Rhode Island and Vermont. It's interesting to note that two of our geographic neighbors had the largest declines. Those three states respectively comprised 27.2% (-5.9pts), 2.0% (-2.6pts), and 0.8% (-1.8pts) of total inflows to Connecticut in 2011. Overall annual inflow to Connecticut was down 7.4 percentage points from 2005 to 2011.

The relation between interstate inflows and outflows isn't the sole variable impacting Connecticut population change, which increased 2.1 percent during the examined seven year span. Other components include birth/death rates and international migration. In 2011, 18,681 new residents immigrated to the state from abroad, up 541 from a year before. Foreign migration has ranged between 0.5 and 0.7 percent of the state population from 2005 through 2011.

Connecticut migration patterns have certainly changed in the past few years. Fewer people are leaving the state for the West Coast and more New Yorkers and New Jerseyans are calling Connecticut home, albeit fewer than before the recession. And when Connecticut residents get tired of the four seasons, they're most likely to head south to Florida.

Graph 1: Connecticut In/Outmigration by Census Region

Note: Non Continential includes Alaska, Hawaii, and Puerto Rico

### THE CONNECTICUT-

The Connecticut Economic Digest is published monthly by the Connecticut Department of Labor, Office of Research, and the Connecticut Department of Economic and Community Development. Its purpose is to regularly provide users with a comprehensive source for the most current, up-to-date data available on the workforce and economy of the state, within perspectives of the region and nation.

The annual subscription is \$50. Send subscription requests to: The Connecticut **Economic Digest**, Connecticut Department of Labor, Office of Research, 200 Folly Brook Boulevard, Wethersfield, CT 06109-1114. Make checks payable to the Connecticut Department of Labor. Back issues are \$4 per copy. The Digest can be accessed free of charge from the DOL Web site. Articles from The Connecticut Economic Digest may be reprinted if the source is credited. Please send copies of the reprinted material to the Managing Editor. The views expressed by the authors are theirs alone and may not reflect those of the DOL or DECD.

Managing Editor: Jungmin Charles Joo Associate Editor: Sarah C. York

We would like to acknowledge the contributions of many DOL Research and DECD staff and Rob Damroth to the publication of the Digest.

### -continued from page 1-

For 2012, the goodsproducing domain encompassed 13.9 percent of total covered employment, with the remaining 86.1 percent in the serviceproviding domain. The goodsproducing domain shrank by 992 jobs while service-producing employment grew by 1.2 percent, or 16,647, at the same time.

### Wages

Connecticut average annual wages varied greatly among industries and within each sector in 2012. It should be noted that much of this difference in pay level can be attributed to factors such as hours worked (full or part-time), workforce composition, wages including bonuses or stock options, and seasonal and weather-related influences.

The highest annual average wage was found in the finance sector at \$155,493, 2.5 times the state average. Within the finance sector, those in securities, commodity contracts and

investments earned an average of \$325,957 in 2012. After finance, the sectors of management of companies and utilities were second and third, with annual wages of \$156,140 and \$109,782, respectively. The management of companies sector improved by 12.2 percent from 2011's \$139,189.

Conversely, accommodation and food services earned the least at \$19,013, though this was an increase of 2.1 percent from 2011, and is heavily influenced by part-time workers. Following them were arts, entertainment and recreation at \$26,292, and agriculture, forestry, fishing and hunting at \$28,088 in annual wages.

Both the goods-producing and service-providing domains saw wage increases in 2012, with goods-producing wages at \$72,918, a 2.3 percent increase over 2011, and a 17.3 premium over the statewide annual average. Service-providing wages rose to \$60,418, a gain of 1.7 percent on an annual basis. ■

The Connecticut Economy's General Drift Indicators are composite measures of the four-quarter change in three coincident (Connecticut Manufacturing Production Index, nonfarm employment, and real personal income) and four leading (housing permits, manufacturing average weekly hours, Hartford help-wanted advertising, and initial unemployment claims) economic variables, and are indexed so 1986 = 100.

The Farmington Bank Business Barometer is a measure of overall economic growth in the state of Connecticut that is derived from non-manufacturing employment, real disposable personal income, and manufacturing production.

The Philadelphia Fed's Coincident Index summarizes current economic condition by using four coincident variables: nonfarm payroll employment, average hours worked in manufacturing, the unemployment rate, and wage and salary disbursements deflated by the consumer price index (U.S. city average).

Total nonfarm employment increased over the year.

### HELP WANTED ONLINE

## CT Online Labor Demand Rose 2,500 in June 2013

The Conference Board's Help Wanted OnLine (HWOL) data reported that there were 66,500 advertisements for Connecticutbased jobs in June, a 3.9 percent increase over the month and a 1.5 percent increase over the year. There were 3.59 advertised vacancies for every 100 persons in Connecticut's labor force, higher than both a month ago and a year ago. Hartford's labor demand rate also rose to 4.36 from the month and the year ago. Nationally, it was 3.20 percent. Among the New England states, Massachusetts had the highest vacancy rate, while Maine had the lowest vacancy rate in June.

NOTE: More industry detail data is available for the State and its nine labor market areas at: http:// www.ctdol.state.ct.us/lmi/202/covered.htm. The data published there differ from the data in the preceding tables in that they are developed from a near-universe count of Connecticut employment covered by the unemployment insurance (UI) program, while the data here is sample-based. The data drawn from the UI program does not contain estimates of employment not covered by unemployment insurance, and is lagged several months behind the current employment estimates presented here.

For further information on these nonfarm employment estimates contact Lincoln Dyer at (860) 263-6292.

### BUSINESS AND EMPLOYMENT CHANGES ANNOUNCED IN THE NEWS MEDIA

- In June 2013, Walmart announced it will hire 95 employees in July when it opens a new store in Bristol. Anthem Blue Cross and Blue Shield will add 100 jobs this summer to its Wallingford location. Mohegan Sun announced it will be expanding, creating 500 construction jobs over the next three years.
- In June 2013, St. Vincent's Medical Center of Bridgeport reduced its staff by 150 employees in order to cut costs. PTR Industries of Bristol, a gun manufacturer, announced it will move to South Carolina over the next three years, eliminating 42 jobs in Connecticut.

Business & Employment Changes Announced in the News Media lists start-ups, expansions, staff reductions, and layoffs reported by the media, both current and future. The report provides company name, the number of workers involved, date of the action, the principal product or service of the company, a brief synopsis of the action, and the source and date of the media article. This publication is available in both HTML and PDF formats at the Connecticut Department of Labor Web site, <a href="http://www.ctdol.state.ct.us/lmi/busemp.htm">http://www.ctdol.state.ct.us/lmi/busemp.htm</a>.

All Labor Market Areas(LMAs) in Connecticut except three are federally-designated areas for developing labor statistics. For the sake of simplicity, the federal Bridgeport-Stamford-Norwalk NECTA is referred to in Connecticut DOL publications as the 'Bridgeport-Stamford LMA', and the Hartford-West Hartford-East Hartford NECTA is referred to as the 'Hartford LMA'. The Bureau of Labor Statistics has identified 17 towns in the northwest part of the State as a separate area for reporting labor force data. For the convenience of our data users, these towns are included in the Torrington LMA. For the same purpuse, five towns which are part of the Springfield, MA area are published as the 'Enfield LMA'. Similarly the towns of Putnam, Thompson and Woodstock (part of the Worcester, MA area), plus four towns estimated separately are included in the Willimantic-Danielson LMA.

### LABOR FORCE CONCEPTS

The **civilian labor force** comprises all state residents age 16 years and older classified as employed or unemployed in accordance with criteria described below. Excluded are members of the military and persons in institutions (correctional and mental health, for example).

The **employed** are all persons who did any work as paid employees or in their own business during the survey week, or who have worked 15 hours or more as unpaid workers in an enterprise operated by a family member. Persons temporarily absent from a job because of illness, bad weather, strike or for personal reasons are also counted as employed whether they were paid by their employer or were seeking other jobs.

The **unemployed** are all persons who did not work, but were available for work during the survey week (except for temporary illness) and made specific efforts to find a job in the prior four weeks. Persons waiting to be recalled to a job from which they had been laid off need not be looking for work to be classified as unemployed.

(By Place of Residence - Not Seasonally Adjusted)

### LABOR FORCE CONCEPTS (Continued)

The **unemployment rate** represents the number unemployed as a percent of the civilian labor force.

With the exception of those persons temporarily absent from a job or waiting to be recalled to one, persons with no job and who are not actively looking for one are counted as "not in the labor force".

Over the course of a year, the size of the labor force and the levels of employment undergo fluctuations due to such seasonal events as changes in weather, reduced or expanded production, harvests, major holidays and the opening and closing of schools. Because these seasonal events follow a regular pattern each year, their influence on statistical trends can be eliminated by adjusting the monthly statistics. **Seasonal Adjustment** makes it easier to observe cyclical and other nonseasonal developments.

### **BUSINESS STARTS AND TERMINATIONS**

Registrations and terminations of business entities as recorded with the Secretary of the State and the Connecticut Department of Labor (DOL) are an indication of new business formation and activity. DOL business starts include new employers which have become liable for unemployment insurance taxes during the quarter, as well as new establishments opened by existing employers. DOL business terminations are those accounts discontinued due to inactivity (no employees) or business closure, and accounts for individual business establishments that are closed by still active employers. The Secretary of the State registrations include limited liability companies, limited liability partnerships, and foreign owned (out-of-state) and demestic-owned (in-state) corporations foreign-owned (out-of-state) and domestic-owned (in-state) corporations.

### CONSUMER PRICE INDEX

The Consumer Price Index (CPI), computed and published by the U.S. Bureau of Labor Statistics, is a measure of the average change in prices over time in a fixed market basket of goods and services. It is based on prices of food, clothing, shelter, fuels, transportation fares, charges for doctors' and dentists' services, drugs and other goods and services that people buy for their day-to-day living. The Northeast region is comprised of the New England states, New York, New Jersey and Pennsylvania.

### **EMPLOYMENT COST INDEX**

The Employment Cost Index (ECI) covers both wages and salaries and employer costs for employee benefits for all occupations and establishments in both the private nonfarm sector and state and local government. The ECI measures employers' labor costs free from the influences of employment shifts among industries and occupations. The base period for all data is June 1989 when the ECI is 100.

### HOURS AND EARNINGS ESTIMATES

Production worker earnings and hours estimates include full- and part-time employees working within manufacturing industries. Hours worked and earnings data are computed based on payroll figures for the week including the 12th of the month. Average hourly earnings are affected by such factors as premium pay for overtime and shift differential as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of weekly hours worked and hourly earnings. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

### INDIAN GAMING DATA

Indian Gaming Payments are amounts received by the State as a result of the slot compact with the two Federally recognized tribes in Connecticut, which calls for 25 percent of net slot receipts to be remitted to the State. Indian Gaming Slots are the total net revenues from slot machines only received by the two Federally recognized Indian tribes.

### INITIAL CLAIMS

Average weekly initial claims are calculated by dividing the total number of new claims for unemployment insurance received in the month by the number of weeks in the month. A minor change in methodology took effect with data published in the March 1997 issue of the DIGEST. Data have been revised back to January 1980.

### INSURED UNEMPLOYMENT RATE

Primarily a measure of unemployment insurance program activity, the insured unemployment rate is the 13-week average of the number of people claiming unemployment benefits divided by the number of workers covered by the unemployment insurance system.

### LABOR FORCE ESTIMATES

Labor force estimates are a measure of the work status of people who live in Connecticut. Prepared under the direction of the U.S. Bureau of Labor Statistics, the statewide estimates are the product of a signal-plus noise model, which uses results from the Current Population Survey (CPS), a monthly survey of Connecticut households, counts of claimants for unemployment benefits, and establishment employment estimates. Beginning with the publication of January 2005 data, an improved methodology is being used to develop labor force estimates, by which monthly state model-based employment and unemployment estimates are controlled to add to the national CPS levels. This will ensure that national economic events are reflected in the state estimates, and it will significantly reduce end-of-year revisions. (For more information, please see the Connecticut Economic Digest, December 2004 issue.) Labor force data, reflecting persons employed by place of residence, are not directly comparable to the place-of-work industry employment series. In the labor force estimates, workers involved in labor disputes are counted as employed. The labor force data also includes agricultural workers, unpaid family workers, domestics and the self-employed. Because of these conceptual differences, total labor force employment is almost always different from nonfarm wage and salary employment.

### LABOR MARKET AREAS

LABOR MARKET AREAS

All Labor Market Areas (LMAs) in Connecticut except three are federally-designated areas for developing labor statistics. For the sake of simplicity, the federal Bridgeport-Norwalk-Stamford Metropolitan Statistical Area (MSA) is referred to in Connecticut Department of Labor publications as the Bridgeport-Stamford LMA, and the Hartford-West Hartford-East Hartford MSA is called the Hartford LMA. The Bureau of Labor Statistics has identified the 17 towns in the in the north-western part of the state as a separate area for reporting labor force data. For the convenience of our data users, data for these towns are included in the Torrington LMA. For the same purpose, data for the towns of East Windsor, Enfield, Somers, Suffield and Windsor Locks, which are officially part of the Springfield MSA, are published as the Enfield LMA. Similarly, the towns of Putnam, Thompson and Woodstock - part of the Worcester MSA - are included in the Willimantic-Danielson LMA. Also, data for Westerly, Rhode Island are included in the Norwich-New London LMA. Industry employment and labor force data estimates contained in Connecticut Department of Labor publications are prepared following the same statistical procedures developed by the U.S. Department of Labor, Bureau of Labor Statistics, whether for federally designated or state-determined areas. federally designated or state-determined areas.

### NONFARM EMPLOYMENT ESTIMATES

Nonfarm employment estimates are derived from a survey of businesses to measure *jobs* by industry. The estimates include all full- and part-time wage and salary employees who worked during or received pay for the pay period which includes the 12th of the month. Excluded from these estimates are proprietors, self-employed workers, private household employees and unpaid family workers. In some cases, due to space constraints, all industry estimates are not shown. Call (860) 263-6275 for a more comprehensive breakout of nonfarm employment estimates. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

### *UI COVERED WAGES*

UI covered wages is the total amount paid to those employees who are covered under the Connecticut's Unemployment Insurance (UI) law for services performed during the quarter. The fluctuations in the 1992-93 period reflect the effect of the changes in the tax law and the massive restructuring in the state's economy.
