Connecticut's 2021 Housing Market: Hitting New Highs

By Nandika Prakash, Ph.D., DECD

C onnecticut's post-pandemic housing market momentum continued into 2021, with home sales and values continuing to rise as COVID restrictions eased. Home prices exceeded 2020 levels to reach a new high, and the number of units sold increased year over year as well. However, rising mortgage rates and low inventory may be a headwind that checks the market in 2022.

Housing Production

Census Bureau data shows that cities and towns in Connecticut authorized 4,651 single and multifamily homes with a total valuation of \$1.22 billion in 2021. Despite the dynamic market, this was a 15% decline from the 5,471 units in 2020. The decrease was driven by 45% fewer permits for multifamily housing compared to 2020 levels; permits for single family structures increased by 17% over 2020, perhaps reflecting changing living preferences.

Connecticut issued 2,941 single family permits which accounted for 63% of the total number of units authorized, the highest share in ten years. Only 32% were multifamily (5 units or more), breaking the recent trend of higher production of multifamily housing. New Haven (299), Milford (199), and Darien (159) had the highest number of permits, most of which were for multifamily housing. Southington (104), Bristol (94), and Greenwich (87) led the way in single family housing authorizations.

Home Sales and Prices

2021 was a record year for the nation's housing market. The

THE CONNECTICUT ECONOMIC DIGEST

The Connecticut Economic Digest is published monthly by the Connecticut Department of Labor, Office of Research, and the Connecticut Department of Economic and Community Development. Its purpose is to regularly provide users with a comprehensive source for the most current, up-to-date data available on the workforce and economy of the state, within perspectives of the region and nation.

The annual subscription is \$50. Send subscription requests to: *The Connecticut Economic Digest*, Connecticut Department of Labor, Office of Research, 200 Folly Brook Boulevard, Wethersfield, CT 06109-1114. Make checks payable to the Connecticut Department of Labor. Back issues are \$4 per copy. The Digest can be accessed free of charge from the DOL Web site. Articles from *The Connecticut Economic Digest* may be reprinted if the source is credited. Please send copies of the reprinted material to the Managing Editor. The views expressed by the authors are theirs alone and may not reflect those of the DOL or DECD.

Managing Editor: Jungmin Charles Joo Associate Editor: Erin C. Wilkins

We would like to acknowledge the contributions of many DOL Research and DECD staff and Rob Damroth to the publication of the Digest.

Department of Economic and Community Development pandemic and the shift to hybrid or remote work, along with low mortgage rates, continued the 2020 surge. According to the national real estate site Redfin,¹ the national median home sale price for all types of homes peaked at \$386,000 in June 2021, 24% higher than June 2020.

The same source shows that Connecticut's median home sale price peaked at \$377,400 in June 2021, 24% higher than a year before. In that same month, 62% of homes sold above list price.² According to Berkshire Hathaway data, in 2021 the median number of days single-family homes were on the market dropped to 24 from 41 in 2020.³ All these indicators illustrate the tightening housing market in the state.

The chart on the front page shows the indexed median home sale price for all types of homes (single and multifamily) for CT and the US since the onset of the pandemic through December 2021. Connecticut's housing market took off once the pandemic began, driven by out-ofstate residents who moved into the state looking to escape dense city living. The state's market continued to outpace the nation even during the traditionally slower winter months, and remained so until winter 2021, when relative prices aligned more with the national trend.

According to the Redfin database, the number of home sales in Connecticut totaled 59,249 in 2021, from 56,239 in 2020, a 5.4% increase. Single family home sales stayed about the same as 2020, at 42,276. Condominium/Co-op sales increased by 19% to 11,807 in 2021.

The same source shows that Connecticut's median sale price for all homes averaged \$337,000 in 2021, an increase of 12% over 2020's average. Single-family home median sale prices averaged \$385,000, a 15.4% increase from 2020. The median sales price 2021 average for condominiums and co-ops reached \$219,000, representing an 11% increase over the year.

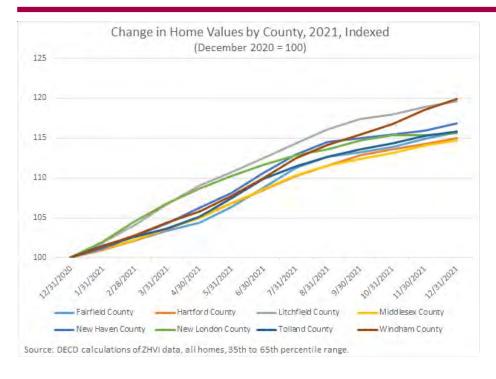

Demand and Supply

The strong demand for housing continued in 2021. The state's sale-to-list price ratio breached 100% in March 2021 and has staved above since, indicating that buyers are typically paying more than the asking price. The share of homes with price drops has been trending downward, averaging 13.5% in 2021, down from prepandemic shares of 20% or higher, suggesting that the market is more favorable to sellers. And the percent of homes sold above list price is on an upward trend, starting 2021 at 36.3% and ending the year at 46.4%, peaking at 62.3% in June.²

Housing supply indicators show a declining supply of homes in the state available to meet buyer demand. The number of homes available for sale in 2021 were lower on a year-over-year comparison for every month compared to 2020. The number of newly listed homes for sale stayed even with 2020, at around 63,000 for the year,² indicating continued confidence on the part of home sellers.

House Values by Region

All of Connecticut's regions benefited from the 2021 boom. The Zillow Home Value index is a smoothed, seasonally adjusted measure of the typical home value and market changes across a given region and housing type.⁴ The series for all mid-range (the 35th to 65th percentile range) homes (single family residences plus condos and co-ops) by county are shown on page 3, indexed to December 2020.

Litchfield and Windham counties saw the biggest increases over the year, possibly reflecting the ongoing demand for lower-density living. Social distancing and remote work arrangements drove buyers into the suburbs beginning in 2020, and in 2021 higher conforming loan limits and low mortgage rates continued to incentivize home buying. Mortgage rates began to rise in 2021 which added a further sense of urgency. The 30-year US conventional mortgage rate which ended 2020 at 2.66% was 3.05% by the end of 2021; this may have pushed more buyers into the market in 2021.⁵

Looking Ahead

While early data shows persisting demand, there are indications that supply side constraints may lead to a slowdown in the housing market nationwide.

In Connecticut, the number of sales for all homes compared to a year ago declined in 2022 Q1, which is likely a reflection of last year's record market instead of any current weakness. Demand continues to be robust,

as the median sales price over 2021 Q1 has increased by 5%, the median number of days on market remains at 27 and most homes continue to sell above list price.³ Though not matching the levels seen in 2020, real estate agents continue to see interest from buyers in New York and Massachusetts.⁶ On the supply side, preliminary Census production data shows that the state's new residential construction permits through April increased 9% compared to the same period in 2021. Continuing the trend from 2021, most permits issued so far this year are for single family units (58%) as opposed to multifamily dwellings (38%).

However, other factors may impose constraints in 2022. Housing inventory will determine the market's performance; low inventory leads to higher prices. New home construction nationwide has been hindered by labor shortages, supply-chain disruptions, inflation, and land shortages driven by zoning restrictions and land-use regulations.⁷

Millennials now make up the largest share of homebuyers.⁸

This population is raising families while paying off student debt, and higher prices along with rising mortgage rates may lead to their postponing homeownership if they deem it unaffordable.

Connecticut is not alone. Lawrence Yun, Chief Economist of the National Association of REALTORS® points out that nationally, "The market is quite unusual as sales are coming down, but listed homes are still selling swiftly, and home prices are much higher than a year ago

... [but] higher home prices and sharply higher mortgage rates have reduced buyer activity."⁹ Prevailing conditions, therefore, point to some market moderation in 2022.

Transit Bus and Rail Ridership Trends

By Al Sylvestre, Research Analyst, Department of Labor

ith transit bus and rail ridership nearing prepandemic levels, the return of passengers to Connecticut's public transportation systems is on an upward trajectory. This stands in contrast to ridership trends from 2017 to 2020 shown in Charts 1 and 2. Chart 1 shows the number of unlinked passenger trips¹ for each of CT Transit's² divisions. Passenger trip decreases from 2019 to 2020 range from 7.2% in Waterbury to 17% in the New Britain division. The Hartford division that operates and manages 30% of the state's transit buses experienced a 17% ridership reduction. Pandemic-induced ridership declines in the nine transit districts outside of CT Transit's divisions (Chart 2) ranged from 63.3% for the Mashantucket-Pequot system to a low of 3.9% in the Northwestern Transit District (NWCTD). The two highest ridership districts, the Greater Bridgeport Transit Authority (GBT) with 4.2 million boardings in

2020, and the Norwalk Transit District with 1.1 million boardings had 20.2% and 18.1% fewer riders than in 2019. The outlier among these regions is the Windham Region Transit District whose nearly 25% ridership increase may be attributable to its concentration of employers whose operations depend on in-person work.

From a low of 5,100 or just 5% of its 2019 daily riders in late April 2020, Metro North Railroad's (M-N R) ridership³ has been trending upward this year, particularly on weekends, as shown in Charts 3 and 4. Saturday and Sunday recovery rates of 96% and 92% show that passengers are returning to the train for leisure trips at a more robust pace than for commuter trips as Mondaythrough-Friday recovery rates range from 56% to 63% with Tuesday as the most popular commuting day of the week. On the days where ridership recovery rates peak

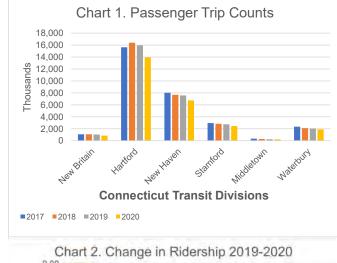

(Chart 4), the total number of Metro North passengers has its valleys as 148,000 to 164,000 strap hangers take the train Monday through Friday while 92,000 ride Metro North on Saturday and only 74,000 ride the rails on Sunday. Tuesday's (June 7) 163,800 passengers represent 81.9% of the average 2019 daily ridership. M-NR sustains its operations and maintenance budget through the pandemic with the help of a \$14 billion cash infusion from the federal government.

Passenger numbers on the Hartford Line, branded as CTrail, increased by 77,400 (27.6%) between April 2020 and the end of 2021. While CTrail's passenger trip growth was significant, its 280,000 riders in 2021 is about half its 2019 ridership of nearly 600,000. Rounding out Connecticut's public transportation picture is Shoreline East's recovery from 1,399 monthly riders in April 2020 (16,800 annualized) to 14,576 (175,000 annualized) for a 942% increase by the end of April 2022.

Among all its modes of public transit, CTDOT says that rail ridership has risen to half of prepandemic levels, while seven out of 10 bus riders have returned. Nationwide ridership on bus systems increased 39% between January and December of 2021. Ridership on buses nationwide in January 2022 was 51% below its January 2020 level.

As federal funding has kept the state's transit bus fleet operating, CTDOT is making plans to bring riders back to mass transit. With \$1.3 billion for public transportation on its way to Connecticut from the federal infrastructure bill signed into law in 2021, CTDOT anticipates making significant investments in its rail and bus systems that include electrification, improved usability of bus stations by adding signage, seating and lighting, and the introduction of real-time bus tracking technology for users. CTDOT recently secured an \$11.4 million federal grant to support the purchase of 22 electric buses, bringing its statewide total to 34. In addition to offering a quieter and quicker ride, electric buses are long-term money savers as they are less expensive to operate and maintain than their internal combustion engine driven counterparts.

Increasing ridership—partly the result of rising gas prices and free bus rides through the end of November—together with the introduction of green technology that includes the replacement of diesel-powered trains with electricpowered rail cars on the Shoreline East rail line as well as the adoption of transit-oriented development in places as diverse as Stamford, West Hartford, Windsor, Windsor Locks, and Enfield augur

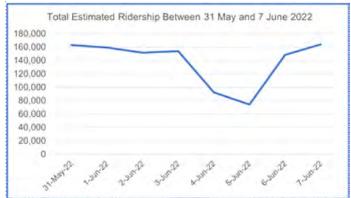

well for the future of public transportation in Connecticut. While much work remains to be done to connect people with transit, particularly the development of micro-mobility infrastructure (protected bicycle lanes, walking trails, electric bikes, electric scooters, and more sidewalks), land use planners, real estate developers, state and local government, and regional planning agencies are responding to growing public desire for the availability of alternatives to single-occupant motor vehicles.

- 1 Unlinked passenger trips represent the raw number of riders that board any given bus without regard to whether the boarding is the result of a transfer or for a single-seat ride.
- 2 The state transportation department (CTDOT) owns about 700 buses operated by First Transportation's HNS subsidiary that manages seven divisions in central and western Connecticut under the CT Transit name. Several additional contractors operate and manage 100 state-owned local and commuter buses through Connecticut's northwestern, and eastern areas.
- 3 Metro-North ridership is estimated by a model using monthly, weekly, ten-trip, and daily ticket sales. Percent change is calculated.

General Drift Indicators are composite measures of the four-quarter change in three coincident (Connecticut Manufacturing Production Index, nonfarm employment, and real personal income) and three leading (housing permits, manufacturing average weekly hours, and initial unemployment claims) economic variables, and are indexed so 2007 = 100.

The **Philadelphia Fed's Coincident Index** summarizes current economic condition by using four coincident variables: nonfarm payroll employment, average hours worked in manufacturing, the unemployment rate, and wage and salary disbursements deflated by the consumer price index (U.S. city average).

NOTE: More industry detail data is available for the State and its nine labor market areas at: http:// www.ctdol.state.ct.us/lmi/202/covered.htm. The data published there differ from the data in the preceding tables in that they are developed from a near-universe count of Connecticut employment covered by the unemployment insurance (UI) program, while the data here is sample-based. The data drawn from the UI program does not contain estimates of employment not covered by unemployment insurance, and is lagged several months behind the current employment estimates presented here.

LABOR FORCE CONCEPTS

The **civilian labor force** comprises all state residents age 16 years and older classified as employed or unemployed in accordance with criteria described below. Excluded are members of the military and persons in institutions (correctional and mental health, for example).

The **employed** are all persons who did any work as paid employees or in their own business during the survey week, or who have worked 15 hours or more as unpaid workers in an enterprise operated by a family member. Persons temporarily absent from a job because of illness, bad weather, strike or for personal reasons are also counted as employed whether they were paid by their employer or were seeking other jobs. The **unemployed** are all persons who did not work, but were available for work during the survey week (except for temporary illness) and made specific efforts to find a job in the prior four weeks. Persons waiting to be recalled to a job from which they had been laid off need not be looking for work to be classified as unemployed.

LABOR FORCE CONCEPTS (Continued)

The unemployment rate represents the number unemployed as a percent of the civilian labor force.

With the exception of those persons temporarily absent from a job or waiting to be recalled to one, persons with no job and who are not actively looking for one are counted as "not in the labor force".

Over the course of a year, the size of the labor force and the levels of employment undergo fluctuations due to such seasonal events as changes in weather, reduced or expanded production, harvests, major holidays and the opening and closing of schools. Because these seasonal events follow a regular pattern each year, their influence on statistical trends can be eliminated by adjusting the monthly statistics. **Seasonal Adjustment** makes it easier to observe cyclical and other nonseasonal developments.

TECHNICAL NOTES

BUSINESS STARTS AND TERMINATIONS

BUSINESS STARTS AND TERMINATIONS Registrations and terminations of business entities as recorded with the Secretary of the State and the Connecticut Department of Labor (DOL) are an indication of new business formation and activity. DOL business starts include new employers which have become liable for unemployment insurance taxes during the quarter, as well as new establish-ments opened by existing employers. DOL business terminations are those accounts discontinued due to inactivity (no employees) or business closure, and accounts for individual business establishments that are closed by still active employers. The Secretary of the State registrations include limited liability companies, limited liability partnerships, and foreign-owned (out-of-state) and domestic-owned (in-state) corporations.

CONSUMER PRICE INDEX

The Consumer Price Index (CPI), computed and published by the U.S. Bureau of Labor Statistics, is a measure of the average change in prices over time in a fixed market basket of goods and services. It is based on prices of food, clothing, shelter, fuels, transportation fares, charges for doctors' and dentists' services, drugs and other goods and services that people buy for their day-to-day living. The Northeast region is comprised of the New England states, New York, New Jersey and Pennsylvania.

EMPLOYMENT COST INDEX

The Employment Cost Index (ECI) covers both wages and salaries and employer costs for employee benefits for all occupations and establishments in both the private nonfarm sector and state and local government. The ECI measures employers' labor costs free from the influences of employment shifts among industries and occupations. The base period for all data is December 2005 when the ECI is 100.

GAMING DATA

Indian Gaming Payments are amounts received by the State as a result of the slot compact with the two Federally recognized tribes in Connecticut, which calls for 25 percent of net slot receipts to be remitted to the State. Indian Gaming Slots are the total net revenues from slot machines only received by the two Federally recognized Indian tribes.

HOURS AND EARNINGS ESTIMATES

Production worker earnings and hours estimates include full- and part-time employees working within manufacturing industries. Hours worked and earnings data are computed based on payroll figures for the week including the 12th of the month. Average hourly earnings are affected by such factors as premium pay for overtime and shift differential as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of weekly hours worked and hourly earnings. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

INITIAL CLAIMS

Average weekly initial claims are calculated by dividing the total number of new claims for unemployment insurance received in the month by the number of weeks in the month. A minor change in methodology took effect with data published in the March 1997 issue of the DIGEST. Data have been revised back to January 1980.

INSURED UNEMPLOYMENT RATE

Primarily a measure of unemployment insurance program activity, the insured unemployment rate is the 13-week average of the number of people claiming unemployment benefits divided by the number of workers covered by the unemployment insurance system.

LABOR FORCE ESTIMATES

LABOR FORCE ESTIMATES Labor force estimates are a measure of the work status of people who live in Connecticut. Prepared under the direction of the U.S. Bureau of Labor Statistics, the statewide estimates are the product of a signal-plus noise model, which uses results from the Current Population Survey (CPS), a monthly survey of Connecticut households, counts of claimants for unemployment benefits, and establishment employment estimates. The 2015 LAUS Redesign includes improved time-series models for the census divisions, states, select substate areas, and the balances of those states; an improved real-time benchmarking procedure to the national Current Population Survey (CPS) estimates; an improved smoothed seasonal adjustment procedure; and improved treatment of outliers. Non-modeled area estimation improvements in-clude: updated Dynamic Residency Ratios (DRR); more accurate estimates for all-other employment; more accurate estimation of agricultural employment; and improved estimation of non-covered agricultural unemployment. Handbook estimation is now done at the city/town level instead of at the Labor Market Area (LMA) level in Connecticut, which better reflects local conditions. The Redesign also introduces estimation inputs from the American Community Survey (ACS) to replace inputs that were previously obtained from the decennial census long-form survey. Labor force data, reflecting persons employed by place of residence, are not directly comparable to the place-of-work industry employment reflecting persons employed by place of residence, are not directly comparable to the place-of-work industry employment series. In the labor force estimates, workers involved in labor disputes are counted as employed. The labor force data also includes agricultural workers, unpaid family workers, domestics and the self-employed. Because of these conceptual differences, total labor force employment is almost always different from nonfarm wage and salary employment.

LABOR MARKET AREAS

LABOR MARKET AREAS All Labor Market Areas (LMAs) in Connecticut except three are federally-designated areas for developing labor statistics. For the sake of simplicity, the federal Bridgeport-Stamford-Norwalk NECTA is referred to in Connecticut DOL publications as the Bridgeport-Stamford LMA, and the Hartford-West Hartford-East Hartford NECTA is the Hartford LMA. The northwest part of the state is now called Torrington-Northwest LMA. Five towns which are part of the Springfield, MA area are published as the Enfield LMA. The towns of Eastford and Hampton and other towns in the northeast are now called Danielson-Northeast LMA. Industry employment and labor force data estimates contained in Connecticut Department of Labor publications are prepared following the same statistical procedures developed by the U.S. Department of Labor, Bureau of Labor Statistics, whether for federally designated or state-determined areas.

NONFARM EMPLOYMENT ESTIMATES

Nonfarm employment estimates are derived from a survey of businesses to measure jobs by industry. The estimates include all full- and part-time wage and salary employees who worked during or received pay for the pay period which includes the 12th of the month. Excluded from these estimates are proprietors, self-employed workers, private household employees and unpaid family workers. In some cases, due to space constraints, all industry estimates are not shown. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

UI COVERED WAGES

UI covered wages is the total amount paid to those employees who are covered under the Connecticut's Unemployment Insurance (UI) law for services performed during the quarter. The fluctuations in the 1992-93 period reflect the effect of the changes in the tax law and the massive restructuring in the state's economy.
