Is Connecticut Losing Jobs to Other States?

By Andy Condon, Ph.D., Director of Research, DOL

R ightly or wrongly, Connecticut's job growth performance is often talked about in the context of "winning" or "losing" to other parts of the country. This article uses the *location quotient* measure to begin to address this issue by using national Quarterly Census of Employment and Wages (QCEW) data to measure relative job growth from and to Connecticut over time.

According to the US Department of Labor's Bureau of Labor Statistics, location quotients are ratios that allow an area's distribution of employment by industry, ownership, and size class to be compared to a reference area's distribution.¹ To put this into Connecticut industry terms:

% of total CT emp. in industry X

% of total national emp. in industry X

A location quotient = 1.0 means that the percent of industry X employment in Connecticut is the same as percent of industry X employment in the US. For example, the 2016 Connecticut location quotient for printing and related support activities (North American Industry Classification System (NAICS) 323) was 1.02, indicating that the concentration of employment in this industry is essentially the same as that seen across the US as a whole. A

Connecticut location quotient of less than 1.0 indicates that Connecticut has a smaller percentage of employment in the indicated industry than does the US. As an extreme example, the 2016 Connecticut location quotient for mining (NAICS 212) is 0.25, confirming that relative to the rest of the US, Connecticut has very little mining activity. A location quotient of greater than 1.0 indicates the Connecticut share of employment in an industry is higher than that of the US as a whole. Not surprisingly, the Connecticut location quotient for the insurance carriers industry is 2.12.

Connecticut 2016 industry location quotients

Table 1 shows the ranking of NAICS industries in Connecticut with a location quotient greater than or equal to 1.0. Note that those industries with the highest location quotients are those with which Connecticut labor markets are often associated, i.e., finance, insurance, broadcasting and aerospace/defense (transportation equipment and fabricated metal product manufacturing).

Table 2 shows those industries with the lowest location quotients in Connecticut. These are most often associated with natural resources, agriculture, and primary product manufacturers. Surprisingly, accommodations are on this list even though it employs

THE CONNECTICUT ۲

The Connecticut Economic Digest is published monthly by the Connecticut Department of Labor, Office of Research, and the Connecticut Department of Economic and Community Development. Its purpose is to regularly provide users with a comprehensive source for the most current, up-to-date data available on the workforce and economy of the state, within perspectives of the region and nation.

The annual subscription is \$50. Send subscription requests to: The Connecticut Economic Digest, Connecticut Department of Labor, Office of Research, 200 Folly Brook Boulevard, Wethersfield, CT 06109-1114. Make checks payable to the Connecticut Department of Labor. Back issues are \$4 per copy. The Digest can be accessed free of charge from the DOL Web site. Articles from The Connecticut Economic Digest may be reprinted if the source is credited. Please send copies of the reprinted material to the Managing Editor. The views expressed by the authors are theirs alone and may not reflect those of the DOL or DECD.

Managing Editor: Jungmin Charles Joo Associate Editor: Erin C. Wilkins

We would like to acknowledge the contributions of many DOL Research and DECD staff and Rob Damroth to the publication of the Digest.

2 THE CONNECTICUT ECONOMIC DIGEST

November 2017

a substantial number of people in the state, nearly 12,000 in 2016.

Industry location quotients over time

Comparing the state's industry location quotients over time will tell us how Connecticut retains or grows employment in comparison to the nation at large. In this analysis industry location quotients are compared from 2005 to the latest available - 2016. Changes in industry location quotients over time indicate that an industry is gaining/losing its relative concentration of employment in comparison to the nation. The chart below outlines the possibilities (Table 2.1).

It is important to note that actual levels of employment over time can be affected by stage of the business cycle, productivity and movement of economic activity to or from overseas.

Table 3 shows the ranking of all three-digit NAICS industries in Connecticut whose location quotients have grown over 5% in the 11-year period from 2005 to 2016. In all of these cases, Connecticut industries have gained employment either from other states or relative to other states. In

T-1-1- 2-4

Table 2.1	
Change in CTLocation Quotient from 2016-2005	Result
LQ 2016 - LQ 2005 > 0	- Conneciticut is gaining employment from or relative to other states
LQ 2016 - LQ 2005 = 0	-Conneciticut employment is unchanged relative to other states
LQ 2016 - LQ 2005 < 0	- Connecticut is losing employment to or relative to other states

some cases such as motion pictures, textiles, beverages & tobacco, furniture, animal production, heavy construction, nonmetallic mineral production, primary metal food production, and real estate, Connecticut's location quotient share is small (< 1.0) but growing. In other cases, such as textile products, furniture, transportation equipment, nonmetallic mineral production and primary metal manufacturing, employment has actually declined over time, but their location quotients have improved. The strategic transportation equipment manufacturing industry (driven by aerospace and shipbuilding) has one of the highest location quotients in the state (2.19), an 11% improvement over 2005 and yet employment has declined by 4%. This is likely due to productivity increases in those industries which have lessened labor demand overall, but in

which Connecticut has declined relatively less.

The remaining industries have significantly higher location quotients that have improved with time. Private households have increased in employment 78% over the period with a location quotient of 3.81 in 2016. This reflects aging demographics and the increased emphasis on providing care to the elderly at home and not in institutions. The motion picture industry has more than doubled in employment over the period, though the location quotient remains less than 1.0. Broadcasting has grown 30% in employment since 2005. The securities and investment industry has recovered nicely from the recession, growing 35% in employment from pre-recession levels.

Table 4 shows Connecticut industries at the other end of the spectrum, i.e., those that have seen location quotient declines

4 THE CONNECTICUT ECONOMIC DIGEST

Total Employment Impacted

over the 2005-2016 period. There are a variety of reasons why this may have occurred, but in all cases Connecticut has lost employment relative to other parts of the country.

In most cases, (17 out of 31) the industries have had traditionally low concentrations of employment in the state (location quotients of less than 1.0), and have continued to lose ground. In other cases, the industry location quotients are greater than one, but have declined over time. In these cases Connecticut has maintained a high concentration of employment, but growth has been faster elsewhere. The insurance industry is perhaps the obvious example.

With a location quotient of 2.12, insurance remains a major employment force in Connecticut, but after undergoing restructuring following the recession and increased competition for this employment nationally, its location quotient has fallen from 2.44 in 2005 – a 13% decline. Another notable decline was chemical manufacturing, mostly driven by the exit of pharmaceutical companies.

Table 5 shows the remaining Connecticut industries, i.e., whose location quotients have not changed substantially over the 11-year period (5% or less). Though seventeen of the twenty nine industries in this category saw job declines over the time period, overall the group saw a 36,449, or 5%, increase in employment. In most cases these industries have smaller employment shares relative to the rest of the nation (location quotients < 1.0), but ten have higher location quotient shares, including some large employment industries such as education, food and beverage, nursing facilities, social assistance and hospitals.

Summary

Returning to the initial question, "is Connecticut losing jobs to other states," the answer is nuanced. Twenty one industries have shown substantial increases in location quotient shares in recent years, impacting 232,000 workers in 2016. These industries grew nearly 32,000 workers or 16% in the eleven-year period, despite the impact of a major recession. Combining this group with the group that has held its own, the total number of workers impacted is nearly 986,000 or 71% of the unemployment insurance-covered workers in the state. In all of these industries, employment has either grown relative to the other states in the country or held its own.

However, employment shares have fallen for thirty one industries, including some with large employment, such as insurance, professional and technical services and ambulatory health care. Nearly 405,000 workers are impacted in this group which has lost net 26,000 jobs or 6% over the 11 year period. In each of these cases industry employment shares have declined relative to the nation as a whole.

In the competitive terms, rightly or wrongly framed at the beginning of this article, 71% of Connecticut jobs are in industries that are performing as well or better than the US as a whole with respect to employment growth. On the other hand, 29% of our jobs are in industries that are lagging in employment growth relative to the rest of the nation.

General Drift Indicators are composite measures of the four-quarter change in three coincident (Connecticut Manufacturing Production Index, nonfarm employment, and real personal income) and three leading (housing permits, manufacturing average weekly hours, and initial unemployment claims) economic variables, and are indexed so 1996 = 100.

The Farmington Bank Business Barometer is a measure of overall economic growth in the state of Connecticut that is derived from non-manufacturing employment, real disposable personal income, and manufacturing production.

The **Philadelphia Fed's Coincident Index** summarizes current economic condition by using four coincident variables: nonfarm payroll employment, average hours worked in manufacturing, the unemployment rate, and wage and salary disbursements deflated by the consumer price index (U.S. city average).

STATE ECONOMIC INDICATORS

Total nonfarm employment increased over the year.

CT online labor demand was same in September

The Conference Board's Help Wanted OnLine (HWOL) data reported that there were 65,400 advertisements for Connecticutbased jobs in September 2017, unchanged over the month and a 0.6 percent decrease over the year. There were 3.40 advertised vacancies for every 100 persons in Connecticut's labor force, while nationally it was 2.79 percent. Among the New England states, Massachusetts had the highest labor demand rate (3.63), while Maine had the lowest rate (2.32).

NOTE: More industry detail data is available for the State and its nine labor market areas at: http:// www.ctdol.state.ct.us/lmi/202/covered.htm. The data published there differ from the data in the preceding tables in that they are developed from a near-universe count of Connecticut employment covered by the unemployment insurance (UI) program, while the data here is sample-based. The data drawn from the UI program does not contain estimates of employment not covered by unemployment insurance, and is lagged several months behind the current employment estimates presented here.

* State-designated Non-CES areas

For further information on these nonfarm employment estimates contact Lincoln Dyer at (860) 263-6292.

BUSINESS AND EMPLOYMENT CHANGES ANNOUNCED IN THE NEWS MEDIA

Amazon hiring 1,000 in state for holiday season

The holiday hiring push by Seattle-based Amazon will nearly double the more than 125,000 regular, full-time employees already working at Amazon's more than 75 centers across the country to help pack and ship customers' holiday orders. In Connecticut, Amazon operates a sortation center in Wallingford and a fulfillment center, or warehouse, in Windsor.

Charter relocating insurance division to Connecticut

Charter Communications would further expand its Connecticut footprint by locating its entire captive insurance operations in the state. "As a Stamford-headquartered business, Charter is pleased to bring our insurance captives to the state of Connecticut," Catherine Bohigian, Charter's executive vice president of government affairs, said in a statement. "As Charter continues to grow in Connecticut, we look forward to furthering economic opportunities in the state."

Three aerospace firms bring 200 employees to downtown Middletown

Belcan, QuEST Global, and Cyient have recently signed leases for office space in downtown Middletown, bringing more than 200 new workers into the city's central core. Belcan has moved into the former National Paint building at the corner of Washington Street and deKoven Drive. QuEST Global and Cyient moved into space in the upper floors of the Main Street Market building within the last two weeks. All three firms do business with Pratt & Whitney, which has huge backlogs with its F-135 and geared turbofan commercial engine programs.

More layoffs planned at RBS' Stamford offices

Royal Bank of Scotland plans to lay off 43 employees in December, continuing cuts that have eliminated several hundred local positions in the past two years. The latest round affects positions in areas include IT, operations and finance.

LABOR FORCE CONCEPTS

The **civilian labor force** comprises all state residents age 16 years and older classified as employed or unemployed in accordance with criteria described below. Excluded are members of the military and persons in institutions (correctional and mental health, for example).

The **employed** are all persons who did any work as paid employees or in their own business during the survey week, or who have worked 15 hours or more as unpaid workers in an enterprise operated by a family member. Persons temporarily absent from a job because of illness, bad weather, strike or for personal reasons are also counted as employed whether they were paid by their employer or were seeking other jobs.

The **unemployed** are all persons who did not work, but were available for work during the survey week (except for temporary illness) and made specific efforts to find a job in the prior four weeks. Persons waiting to be recalled to a job from which they had been laid off need not be looking for work to be classified as unemployed.

LABOR FORCE CONCEPTS (Continued)

3.8

CONNECTICUT

UNITED STATES

The unemployment rate represents the number unemployed as a percent of the civilian labor force.

604

15,118

15,722

With the exception of those persons temporarily absent from a job or waiting to be recalled to one, persons with no job and who are not actively looking for one are counted as "not in the labor force".

Over the course of a year, the size of the labor force and the levels of employment undergo fluctuations due to such seasonal events as changes in weather, reduced or expanded production, harvests, major holidays and the opening and closing of schools. Because these seasonal events follow a regular pattern each year, their influence on statistical trends can be eliminated by adjusting the monthly statistics. **Seasonal Adjustment** makes it easier to observe cyclical and other nonseasonal developments.

BUSINESS STARTS AND TERMINATIONS

BUSINESS STARTS AND TERMINATIONS Registrations and terminations of business entities as recorded with the Secretary of the State and the Connecticut Department of Labor (DOL) are an indication of new business formation and activity. DOL business starts include new employers which have become liable for unemployment insurance taxes during the quarter, as well as new establish-ments opened by existing employers. DOL business terminations are those accounts discontinued due to inactivity (no employees) or business closure, and accounts for individual business establishments that are closed by still active employers. The Secretary of the State registrations include limited liability companies, limited liability partnerships, and foreign-owned (out-of-state) and domestic-owned (in-state) corporations.

CONSUMER PRICE INDEX

The Consumer Price Index (CPI), computed and published by the U.S. Bureau of Labor Statistics, is a measure of the average change in prices over time in a fixed market basket of goods and services. It is based on prices of food, clothing, shelter, fuels, transportation fares, charges for doctors' and dentists' services, drugs and other goods and services that people buy for their day-to-day living. The Northeast region is comprised of the New England states, New York, New Jersey and Pennsylvania.

EMPLOYMENT COST INDEX

The Employment Cost Index (ECI) covers both wages and salaries and employer costs for employee benefits for all occupations and establishments in both the private nonfarm sector and state and local government. The ECI measures employers' labor costs free from the influences of employment shifts among industries and occupations. The base period for all data is December 2005 when the ECI is 100.

GAMING DATA

Indian Gaming Payments are amounts received by the State as a result of the slot compact with the two Federally recognized tribes in Connecticut, which calls for 25 percent of net slot receipts to be remitted to the State. Indian Gaming Slots are the total net revenues from slot machines only received by the two Federally recognized Indian tribes.

HOURS AND EARNINGS ESTIMATES

Production worker earnings and hours estimates include full- and part-time employees working within manufacturing industries. Hours worked and earnings data are computed based on payroll figures for the week including the 12th of the month. Average hourly earnings are affected by such factors as premium pay for overtime and shift differential as well as changes in basic hourly and incentive rates of pay. Average weekly earnings are the product of weekly hours worked and hourly earnings. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

INITIAL CLAIMS

Average weekly initial claims are calculated by dividing the total number of new claims for unemployment insurance received in the month by the number of weeks in the month. A minor change in methodology took effect with data published in the March 1997 issue of the DIGEST. Data have been revised back to January 1980.

INSURED UNEMPLOYMENT RATE

Primarily a measure of unemployment insurance program activity, the insured unemployment rate is the 13-week average of the number of people claiming unemployment benefits divided by the number of workers covered by the unemployment insurance system.

LABOR FORCE ESTIMATES

Labor force estimates are a measure of the work status of people who live in Connecticut. Prepared under the direction of the U.S. Bureau of Labor Statistics, the statewide estimates are the product of a signal-plus noise model, which uses results from the Current Population Survey (CPS), a monthly survey of Connecticut households, counts of claimants for unemployment benefits, and establishment employment estimates. The 2015 LAUS Redesign includes improved timeseries models for the census divisions, states, select substate areas, and the balances of those states; an improved real-time benchmarking procedure to the national Current Population Survey (CPS) estimates; an improved smoothed seasonal adjustment procedure; and improved treatment of outliers. Non-modeled area estimation improvements include: updated Dynamic Residency Ratios (DRR); more accurate estimates for all-other employment; more accurate estimation of pop-covered agricultural unemployment. Handbook estimation of agricultural employment; and improved estimation of non-covered agricultural unemployment. Handbook estimation is now done at the city/town level instead of at the Labor Market Area (LMA) level in Connecticut, which better reflects local conditions. The Redesign also introduces estimation inputs from the American Community Survey (ACS) to replace inputs that were previously obtained from the decennial census long-form survey. Labor force data, reflecting persons employed by place of residence, are not directly comparable to the place-of-work industry employment particulated in labor force activity of the discussion of the decential comparable to the place-of-work industry employment series. In the labor force estimates, workers involved in labor disputes are counted as employed. The labor force data also includes agricultural workers, unpaid family workers, domestics and the self-employed. Because of these conceptual differences, total labor force employment is almost always different from nonfarm wage and salary employment

LABOR MARKET AREAS

LABOR MARKET AREAS All Labor Market Areas (LMAs) in Connecticut except three are federally-designated areas for developing labor statistics. For the sake of simplicity, the federal Bridgeport-Stamford-Norwalk NECTA is referred to in Connecticut DOL publications as the Bridgeport-Stamford LMA, and the Hartford-West Hartford-East Hartford NECTA is the Hartford LMA. The northwest part of the state is now called Torrington-Northwest LMA. Five towns which are part of the Springfield, MA area are published as the Enfield LMA. The towns of Eastford and Hampton and other towns in the northeast are now called Danielson-Northeast LMA. Industry employment and labor force data estimates contained in Connecticut Department of Labor publications are prepared following the same statistical procedures developed by the U.S. Department of Labor, Bureau of Labor Statistics, whether for federally designated or state-determined areas.

NONFARM EMPLOYMENT ESTIMATES

Nonfarm employment estimates are derived from a survey of businesses to measure *jobs* by industry. The estimates include all full- and part-time wage and salary employees who worked during or received pay for the pay period which includes the 12th of the month. Excluded from these estimates are proprietors, self-employed workers, private household employees and unpaid family workers. In some cases, due to space constraints, all industry estimates are not shown. These data are developed in cooperation with the U.S. Department of Labor, Bureau of Labor Statistics.

UI COVERED WAGES

UI covered wages is the total amount paid to those employees who are covered under the Connecticut's Unemployment Insurance (UI) law for services performed during the quarter. The fluctuations in the 1992-93 period reflect the effect of the changes in the tax law and the massive restructuring in the state's economy.
