## INTRODUCTION

The intent of this publication, Connecticut Occupational Employment & Wages, is to provide accurate and meaningful wage information to employers, job seekers, counselors, students, planners of vocational education programs, economic developers, Regional Workforce Development Boards, and others. Employers may find the data useful as a guide in analyzing pay scales; job seekers and students could utilize the information in making employment and career decisions; program planners should be aware of employment and wage levels in determining training programs to be offered.

This report provides employment and wage data by occupation and is based on the results of the Occupational Employment Statistics (OES) survey. The OES program conducts a bi-annual mail survey designed to produce estimates of employment and wages for over 800 occupations. These estimates are generated at the national, state, and metropolitan area levels. The current estimates have a reference date of the second quarter of 2010, and wage levels are then updated to the second quarter of 2011 by scaling them by the Employment Cost Index (ECI) for the appropriate occupational division. National estimates are derived from responses from 1,200,000 business establishments, while state estimates are based on approximately 18,000 sampled establishments.

Respondents did not report actual wages. Rather, they reported employment in twelve wage ranges. Annual wages were calculated, assuming that full-time employees work a 40-hour week, 52 weeks per year. Employers were requested to report part-time workers by their hourly rate, rather than by their annual wage. Wages represent gross straight-time earnings, commissions, and other incentive payments based on production, before payroll deductions. Employers excluded overtime pay, shift differential, holiday pay or other non-production bonuses, and any other non-regular pay. Employment and wages in this publication are reported for 22 major occupational groups according to function

performed. Within each of these groups, the following information is shown for specific occupations:

- Employment - the estimated number of workers in the occupation statewide, based on response to the survey.
- Wages
  - Entry Level - the wage rate is actually the hourly mean of the first third of the wage distribution. The OES program does not ask employers for any information concerning the experience level of the occupation collected.
  - Wage Range - the wage range encompassing 80 percent of the workers in the occupation. It excludes the 10 percent of workers who earned less than the low end of the range and the 10 percent that earned more than the high end of the range.
  - Average Hourly Wage - the average of all wages weighted by the number of employees that received that wage.<sup>4</sup>
  - Average Annual Wage - the average hourly wage multiplied by 2,080 hours (full-time employee).

The success of this publication is due primarily to employers willing to spend time to accurately complete the survey. Because wage and salary information is usually sensitive, the confidentiality of participating employers is assured. Data are not published if the possibility exists of revealing a firm's wage rates.

OCCUPATIONS WITH THE HIGHEST AVERAGE ANNUAL WAGE

Occupations	Estimated Employment	WAGES (\$)				
		Entry Level	Wage Range	Mid-Wage	Average Hourly Annual	
<b>Management Occupations</b>						
Chief Executives	3,190	57.67	50.79 - >80.00	>80.00	98.39	204,650
General and Operations Managers	29,080	31.49	27.13 - >80.00	58.80	67.93	141,303
Natural Sciences Managers	1,180	35.62	32.29 - >80.00	57.00	64.96	135,126
Engineering Managers	3,900	41.67	38.12 - >80.00	57.41	59.82	124,418
Marketing Managers	4,970	29.69	25.54 - >80.00	49.76	56.33	117,153
<b>Business and Financial Operations Occupations</b>						
Personal Financial Advisors	3,210	24.61	20.87 - >80.00	46.91	58.50	121,685
Agents and Business Managers of Artists, Performers, and Athletes	N/A	8.95	8.72 - >80.00	24.96	51.91	107,969
Financial Analysts	5,490	26.19	24.00 - >80.00	39.13	49.12	102,168
Credit Analysts	1,100	24.96	22.16 - >80.00	38.01	46.06	95,807
Financial Examiners	270	28.10	26.15 - 75.03	43.77	45.28	94,182

The mid-wage is the median wage. The average wage is the mean wage. The entry-level wage is equal to the average of the lower third of reported wages for the occupation. The wage range consists of the 10<sup>th</sup> and 90<sup>th</sup> percentiles; 80 percent of workers earn between this wage range, 10 percent earn less while 10 percent earn more.

OCCUPATIONS WITH THE HIGHEST AVERAGE ANNUAL WAGE

Occupations	Estimated Employment	WAGES (\$)			
		Entry Level	Wage Range	Mid-Wage	Average Hourly Annual
<b>Computer and Mathematical Science Occupations</b>					
Actuaries	780	30.74	28.42 - 77.33	44.90	49.44 102,825

Legislators	580	18,379	17,638 - 56,966	19,995	31,008

\* The workers in these occupations are paid based on an annual amount, but generally work less than the usual 2,080 hours per year. Since the survey does not collect the actual hours worked, the hourly rate cannot be calculated with a reasonable degree of confidence from the annual wages. For these occupations, the annual wages have been directly calculated from the reported survey data.

The mid-wage is the median wage. The average wage is the mean wage. The entry-level wage is equal to the average of the lower third of reported wages for the occupation. The wage range consists of the 10<sup>th</sup> and 90<sup>th</sup> percentiles; 80 percent of workers earn between this wage range, 10 percent earn less while 10 percent earn more.

The mid-wage is the median wage. The average wage is the mean wage. The entry-level wage is equal to the average of the lower third of reported wages for the occupation. The wage range consists of the 10<sup>th</sup> and 90<sup>th</sup> percentiles; 80 percent of workers earn between this wage range, 10 percent earn less while 10 percent earn more.

## METHODOLOGY

### SCOPE

The Occupational Employment Statistics (OES) survey is a semiannual mail survey measuring occupational employment and wage rates for wage and salary workers in nonfarm establishments. In November 2002, the OES survey changed from an annual survey of 7,000 establishments to a semiannual survey of 3,500 establishments. Currently, the OES survey samples and contacts establishments in May and November of each year and, over 3 years, contacts approximately 18,000 establishments. The full three-year sample allows the production of estimates at fine levels of geographic, industrial, and occupational detail.

The OES survey covers all full-time and part-time wage and salary workers in nonfarm industries. The survey does not include the self-employed, owners and partners in unincorporated firms, household workers, or unpaid family workers.

In 1999, the OES survey began using the Office of Management and Budget's occupational classification system, the Standard Occupational Classification system (SOC). The OES survey categorizes workers in one of about 800 detailed occupations.

### RESPONSE

The statewide response rate for the May 2010 survey was 75 percent for establishments, covering 72 percent of weighted employment.

### CONCEPTS

Data were collected primarily by mail. Survey schedules were initially mailed out to most of the sample establishments while personal visits were made to some of the larger companies. Three additional mailings were sent to nonrespondents at approximately three-week intervals. Telephone follow-ups and, in some cases, personal visit follow-ups were made for those nonrespondents considered critical to the survey due to their size.

Employment is the estimate of total wage and salary employment in an occupation across the industries in which it was reported.

The OES survey form sent to an establishment contains between 50 and 225 SOC occupations selected on the basis of the industry classification and size class of the sampled establishments. Each survey form is structured to allow a respondent to provide information for each detailed occupation employed at the establishment; that is, unlisted occupations can be added to the survey form.

Wages for the OES survey are straight-time, gross pay, exclusive of premium pay. Base rate, cost-of-living allowances, guaranteed pay, hazardous-duty pay, incentive pay including commissions and production bonuses, tips, and on-call pay are included. Excluded are back pay, jury duty pay, overtime pay, severance pay, shift differentials, nonproduction bonuses, employer cost of supplementary benefits, and tuition reimbursements.

Each industry-specific questionnaire contained a grid of occupational titles, grouped by occupational division, with twelve wage ranges and a total column. Employers were asked to indicate the number of workers they employed in each wage range by occupation. Workers performing the functions of more than one occupation were to be classified in the occupation with the highest level of skill; or, if there was no measurable difference in skill requirements, workers were to be classified in the occupation in which they spent most of their time.

The wage intervals are defined both as hourly rates and the corresponding annual rates, where the annual rates are constructed by multiplying the hourly wage rate for the interval by the typical work year of 2,080 hours. In reporting, the respondent can reference either the hourly or the annual rate, but is instructed to report the hourly rate for part-time workers. Wage interval endpoints are determined by using the wage rate data collected by the Bureau of Labor Statistics' National Compensation Survey (NCS). In the case of the open-ended lower

interval (Range A), Connecticut's 2010 minimum wage of \$8.25 was used as the interval's starting point.

<b>Range</b>	<b>Hourly</b>	<b>Annual</b>
A	Under \$9.25	Under \$19,240
B	\$9.25 - \$11.49	\$19,240 - \$23,919
C	\$11.50 - \$14.49	\$23,920 - \$30,159
D	\$14.50 - \$18.24	\$30,160 - \$37,959
E	\$18.25 - \$22.74	\$37,960 - \$47,319
F	\$22.75 - \$28.74	\$47,320 - \$59,799
G	\$28.75 - \$35.99	\$59,800 - \$74,879
H	\$36.00 - \$45.24	\$74,880 - \$94,119
I	\$45.25 - \$56.99	\$94,120 - \$118,559
J	\$57.00 - \$71.49	\$118,560 - \$148,719
K	\$71.50 - \$89.99	\$148,720 - \$187,199
L	\$90.00 and over	\$187,200 and over

Because OES wage data are collected into 12 contiguous, non-overlapping wage intervals, the individual wage rates of the workers are not captured. A mean wage value is calculated for each wage interval based on occupational wage data collected by the Office of Compensation and Working Conditions for the National Compensation Survey (NCS).

**STATE DATA**

Data are collected for the universe of state government agencies, rather than a sample of employment. State government operations are surveyed every year, with the data collected and processed with the rest of the survey responses.

**ESTIMATION METHODOLOGY**

The OES survey samples approximately 3,000 establishments semiannually in two panels. One panel is sampled in the second quarter, the other in the fourth quarter. Approximately 18,000 establishments are sampled over a six-panel cycle. While estimates can be made from a single panel or a single year of data, the OES survey is designed to produce estimates at a desired level of precision using six panels. A six-panel sample allows the production of estimates at fine levels of geographical, industrial, and occupational detail. For the May 2010 OES survey, estimates are based on data collected from establishments in May 2010, November 2009, May 2009, November 2008, May 2008, and November 2007. Combining multiple years of data has statistical advantages. Significant reductions in sampling error can be achieved by taking advantage of a full three years of data, which covers over 70 percent of the employment in Connecticut. While there are significant advantages, the limitation associated with this estimation procedure is that it requires "wage-updating" for the earlier years of data. For "wage-updating" purposes, the OES program has been using the Bureau of Labor Statistics' Employment Cost Index (ECI) to update wage rate data from previous panels before combining them with the current panel. The wage updating process assumes that: (1) each occupation's wage rate, as measured in earlier panels, shifts across time at the same pace as the broader occupational division that encompasses it and (2) geography and industry are not major factors in the wage updating process. The Bureau has conducted research over the past several years on the accuracy of updating wage rates using the ECI. In this research, the ECI wage-updating approach was compared to alternative modeling approaches. Current research results support the continued use of ECI wage-updating.

In addition, a "nearest neighbor" hot deck imputation procedure was used to impute occupational employment totals for establishments that reported no employment data. For establishments that reported or imputed occupational employment totals but did not report an employment distribution across the wage intervals, a variation of mean imputation was used to impute the distribution. During estimates processing, OES employment estimates are benchmarked to the mean of
